How to Use This Catalog

Section 1 – Pure Gases

Pure gases are listed in alphabetical order. Additional products are available upon request. If you do not see your requirement listed, please contact the nearest PurityPlus sales office.

Many Specialty Gas products are available in bulk quantities. If you need special size cylinders, manifolded cylinder banks, ton containers, tube trailers or cryogenic trailers, please contact the nearest PurityPlus sales office.

Section 2 – Mixed gases

Two Component Mixtures are listed alphabetically by MINOR component. Standard balance gases are listed. Additional balance gases may be available. Please check with our technical staff.

Three Component Mixtures – Common components and balance gases listed.

Section 3 – Special Application Mixtures

These common mixtures are listed by use.

Section 4 – Equipment

Specialty Gas Handling Equipment is listed by type of product, i.e. regulators, flowmeters, etc. There is an index at the beginning of the section.

Equipment recommendations for each gas can also be found on the product pages with a reference to the proper catalog page.

Section 5 – Technical Information

Material Compatibility Chart
Unit Conversion Tables

Section 6 – Glossary

Introduction

PurityPlus Specialty Gases and Gas Handling Equipment are offered by the Independent Welding Distributor Cooperative (IWDC) to their customers in North America. Over 150 Independent Distributors in North America are proud to offer this quality brand of Specialty Gases. The quality of PurityPlus Specialty Gases combined with the service and dependability of our Independent Distributors are unequaled by anyone. Most of our family owned businesses have been servicing their customers for the better part of a century.

The map on page vi shows the distribution points available to the IWDC. Many products are already stock items for our customers. Please check with the nearest sales office to see if they can stock products for your requirements.

We have over twenty producing laboratories in North America. The combined technical experience of our laboratory personnel and our state-of-the-art facilities allow us to provide you with the best product for your application.

Quality Assurance: To ensure that you receive only the highest quality products, our producing laboratories exercise strict QA inspection standards for incoming material and maintain the most stringent quality control throughout the entire production process.

Availability and Service: With over 150 Independent Distributors with over 600 locations throughout North America, IWDC has one of the largest networks to supply your specialty gas and equipment requirements. Many of the hundreds of products that we offer are stocked locally for our customers. Please contact your local sales office if you have a need to stock additional products or package sizes. We pride ourselves on our ability to service our customers. We can meet many special delivery needs. Please contact us if you have any special requirements.

Nonstandard Containers and Products: Many of the products listed are available in special non-standard containers. Many products are also available in bulk and mini-bulk quantities. This includes tube trailers, liquid trailers, liquid cylinders, manifolded cylinder skids, ton containers and more. Additionally, non-standard and special order specialty gases may also be available. This is especially true for gas mixtures. We are able to supply many different non-standard liquid and gas components with various balance gases, taking physical or safety limitations into consideration. Please contact the nearest sales office for availability and pricing.

Gas Handling Equipment: We carry only the highest quality gas handling equipment from regulators to filters to cylinder gas manifolds. Please refer to the recommended equipment for each gas that you need. Please contact us if you have any questions as to how to safely handle the products you are using.

Product Safety

The gases available through this catalog are hazardous. Some of the gases are flammable, toxic, or corrosive. As with any chemical or compressed gas improper use can cause serious injury or even death. Please be sure to review all available safety precautions when handling these gases, including the applicable Material Safety Data Sheet which is provided with each gas product. If you have any questions regarding the safe handling or use of any product we supply, please contact the nearest PurityPlus Sales Office.

Additional safety information is available from the Compressed Gas Association, DOT regulations, and applicable OSHA guidelines. Many other industry associated references are available to review the safety requirements for the handling and storage of industrial and specialty gases.

Terms and Conditions

The PurityPlus producers have the following terms and conditions for the sales of the products in this catalog. All sales of the products listed in this catalog shall be governed by these terms and conditions.

1. **Terms of sale.** Gas prices are FOB stocking point unless otherwise noted. All freight, handling, and additional related charges relating to the shipment of these products will be at the account of the Purchaser. Purchaser will pay the sales, use or excise tax imposed on the sales or delivery of these products. Terms of payment will be net 15 days from date of invoice. Seller reserves the right to increase or decrease prices from time to time. Seller's price in effect at time of shipment will apply to all orders. There is a minimum charge of \$50.00 per invoice (excluding cylinder rent or demurrage).
2. **Warranty.** Gases - Seller warrants that the products will meet the specifications listed in this catalog. Gas products will be adequately packaged and labeled in accordance with all appropriate regulations and industry standards. Equipment will be free from defects in material and workmanship. Purchaser shall inspect and examine each shipment upon receipt, and, unless a written claim is delivered to Seller within 10 days thereafter, all claims with respect to said shipment or the products contained therein shall be conclusively deemed waived and Purchaser shall be conclusively deemed to have accepted delivery of such product and that Seller is in full compliance with all of the obligations to Purchaser with respect to such product. No claim against the seller shall be made, whether or not based on negligence or warranty, shall exceed the purchase price of the product. THERE ARE NO EXPRESS WARRANTIES OTHER THAN THOSE SPECIFIED IN THIS PARAGRAPH. SELLER MAKES NO OTHER WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, IN FACT OR BY LAW, INCLUDING, BUT NOT LIMITED TO ANY WARRANTY OF MERCHANTABILITY OR WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE.
3. **WARNING!** SELLER WARNS PURCHASER THAT THERE ARE HAZARDS ASSOCIATED WITH THE USE OF THE PRODUCTS LISTED IN THIS CATALOG. PURCHASER ACKNOWLEDGES THAT THERE ARE HAZARDS ASSOCIATED WITH THE USE AND STORAGE OF THESE PRODUCTS OR EQUIPMENT, THAT IT UNDERSTANDS SUCH HAZARDS, AND THAT IT IS THE RESPONSIBILITY OF THE PURCHASER TO WARN AND PROTECT ITS EMPLOYEES AND OTHERS EXPOSED TO SUCH HAZARDS THROUGH THE STORAGE AND USE OF THESE PRODUCTS OR EQUIPMENT. PURCHASER ASSUMES ALL RISK AND LIABILITY FOR LOSS, DAMAGES OR INJURY TO PERSONS OR TO PROPERTY ARISING FROM THE PRESENCE OR USE OF THESE PRODUCTS OR EQUIPMENT. SELLER SHALL NOT BE LIABLE FOR ANY INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES ASSOCIATED WITH THE USE OR MISUSE OF THESE PRODUCTS OR EQUIPMENT. Determination of the suitability of the products purchased and the results of using product alone or in combination with other articles or substances and in any manufacturing, medical, or other process or procedure is the sole responsibility of Purchaser. Seller shall have no responsibility in connection therewith.
4. **Contingencies.** Neither the seller nor purchaser will be liable to the other for default or delay in the performance of any of their obligations to each other in connection with the purchase, sale, shipment or delivery of the products due to an Act of God, accident, fire, flood, storm, riot, war, sabotage, explosion, strike or other labor disturbance, national defense requirement, governmental law, ordinance, rule or regulation, inability to obtain electricity, or other type of energy, raw material, labor, equipment or transportation, or any other contingency beyond their reasonable control.
5. **Cylinders.** Most gas products will be supplied in Seller owned, returnable cylinders. There may be a charge for the use of these cylinders. Purchaser will return these cylinders to the Seller in a non-contaminated condition with all valves tightly closed. If dust plugs or dust caps have been provided, these must be reinstalled and securely tightened to the cylinder valve outlet. Cylinder caps must be in place and securely tightened. All returnable cylinders will remain the property of the seller at all times. Purchaser will pay seller for any damage beyond normal wear and tear while in the possession of the Purchaser. This does not apply to any non-returnable or disposable container. ALL CYLINDERS MUST BE RETURNED FREIGHT PREPAID. Purchaser will be charged current replacement cost for any lost cylinders.

PurityPlus Distribution Centers Located Throughout North America

PurityPlus is supplied through a network of Independent Distributor Members known as the IWDC – a 60 year old North American cooperative of producers and distributors of specialty gases

With over 150 members and more than 600 locations, no matter where you are throughout the U.S., Canada, and Mexico, a local PurityPlus distribution center will be ready to provide quick and dedicated service. Corporations with operations in multiple locations can rely on the exclusive network of PurityPlus producers to ensure that each of their facilities receive the same high quality gases and gas mixtures, with the same stringent specifications, wherever they are.

Hydrogen Sulfide	1.25	Trimethylamine (TMA)	1.52
Isobutane	1.26	Xenon	1.53
Isobutylene	1.27		

A colorless, highly flammable gas.

Acetylene

Technical Information:	
Chemical Symbol:	C ₂ H ₂
Molecular Weight:	26.04
Specific Volume	14.7 ft ³ /lb (0.91 m ³ /kg)
CAS Registry Number:	74-86-2

Shipping Information:	
DOT Proper Name:	Acetylene, dissolved
Hazard Class:	2.1
I.D. Number:	UN 1001
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus Purified 2.6 (For Atomic Absorption)	ACE-26-XXX	99.6%	Oxygen plus CH ₄ PH ₃	< 4000 ppm < 20 ppm	200 series brass regulator see page 4.8

XXX - Complete the part number with the desired cylinder size listed below. (ie. ACE-26-380)

Standard Cylinder Sizes *	Contents ft ³ /m ³	Cylinder Pressure PSIG	CGA Valve Connection
380	330	250	510
140	130	250	510

*Nonstandard cylinder sizes available upon request

Air

A colorless, odorless, nonflammable gas.

Technical Information:

Chemical Symbol:	N/A
Molecular Weight:	28.96
Specific Volume	13.3 ft ³ /lb (0.83 m ³ /kg)
CAS Registry Number:	132259-10-0

Shipping Information:

DOT Proper Name:	Air, Compressed
Hazard Class:	2.2
I.D. Number:	UN 1002
Labels:	Nonflammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus Ultra Zero	AIR-UZ-XXX		Total Hydrocarbons Moisture Oxygen Carbon Dioxide Carbon Monoxide	< 0.1 ppm < 3 ppm 19.5% to 23.5% < 1 ppm < 1 ppm	300 series brass regulator see page 4.12
PurityPlus Zero	AIR-ZE-XXX		Total Hydrocarbons Oxygen	<1 ppm 19.5% to 23.5%	300 series brass regulator see page 4.12
PurityPlus Extra Dry	AIR-ED-XXX		Moisture Oxygen	< 8 ppm 19.5% to 23.5%	200 series brass regulator see page 4.8

XXX - Complete the part number with the desired cylinder size listed below. (ie. AIR-UZ-300)

Standard Cylinder Sizes *	Contents ft ³ /m ³	Cylinder Pressure PSIG	CGA Valve Connection
300	311	2640	590
200	233	2200	590
80	88	2200	590

*Nonstandard cylinder sizes available upon request

A colorless, pungent, toxic gas.

Ammonia

Technical Information:	
Chemical Symbol:	NH ₃
Molecular Weight:	17.03
Specific Volume	22.6 ft ³ /lb (1.41 m ³ /kg)
CAS Registry Number:	7664-41-7

Shipping Information:	
DOT Proper Name:	Ammonia, Anhydrous
Hazard Class:	2.2
I.D. Number:	UN 1005
Labels:	Non-Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus VLSI 4.5 (Liquid Phase)	AMM-VL-XX	99.995%	Oil Moisture	< 0.5 ppm < 3 ppm	400 series stainless steel regulator see page 4.18
PurityPlus 2.5 (Liquid Phase)	AMM-25-XX	> 99.5%	Total Impurities	< 0.5%	400 series stainless steel regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. AMM-VL-400)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure PSIG	CGA Valve Connection
400	150	114	660/240
150A	30	114	660/705

LB	1	4.4	660

*Nonstandard cylinder sizes available upon request

Boron Trifluoride

A nonflammable, toxic and corrosive gas.

Technical Information:

Chemical Symbol:	BF ₃
Molecular Weight:	67.781
Specific Volume	5.6 ft ³ /lb (0.350 m ³ /kg)
CAS Registry Number:	7637-07-2

Shipping Information:

DOT Proper Name:	Boron Trifluoride, Compressed
Hazard Class:	2.3
I.D. Number:	UN1008
Labels:	Poison Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.5 (Chemically Pure)	BTF-25-XX	> 99.5%	Total Impurities	< 0.5%	400 series stainless steel regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. BTF-25-200)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure PSIG	CGA Valve Connection
200	60	1800	330
35	10	1800	330
LB	0.375	1800	180

*Nonstandard cylinder sizes available upon request

A colorless, flammable gas shipped as a liquid under its own vapor pressure.

1,3-Butadiene

Technical Information:	
Chemical Symbol:	C ₄ H ₆
Molecular Weight:	54.09
Specific Volume	6.9 ft ³ /lb (0.431 m ³ /kg)
CAS Registry Number:	106-99-0

Shipping Information:	
DOT Proper Name:	Butadienes, Inhibited
Hazard Class:	2.1
I.D. Number:	UN1010
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.0 (Chemically Pure)	13B-20-XX	> 99.0% Liquid Phase	Total Impurities	< 1 %	3700 HP series LP gas regulator see page 4.60

XXX - Complete the part number with the desired cylinder size listed below. (ie. HYD-50-300)

Standard Cylinder Sizes *	Contents ft ³ /m ³	Cylinder Pressure PSIG	CGA Valve Connection
300	261	2400	350
200	195	2000	350
80	71	2000	350

*Nonstandard cylinder sizes available upon request

A colorless, corrosive, irritating, toxic gas shipped as a liquid under its own vapor pressure.

Hydrogen Bromide

Technical Information:	
Chemical Symbol:	HBr
Molecular Weight:	80.91
Specific Volume	4.76 ft ³ /lb (0.297 m ³ /kg)
CAS Registry Number:	10035-10-6

Shipping Information:	
DOT Proper Name:	Hydrogen Bromide, Anhydrous
Hazard Class:	2.3
I.D. Number:	UN1048
Labels:	Inhalation Hazard, Corrosive

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.8 (Chemically Pure)	HYB-28-XX	> 99.8% Liquid Phase	Total Impurities	< 2000 ppm	400 series stainless steel regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. HYB-28-80)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
80	30	320	330
30	10	320	330
LB	1	320	180

*Nonstandard cylinder sizes available upon request

Hydrogen Chloride

A colorless, corrosive, irritating, toxic gas.

Technical Information:

Chemical Symbol:	HCl
Molecular Weight:	36.46
Specific Volume	10.6 ft ³ /lb (0.68 m ³ /kg)
CAS Registry Number:	7647-01-0

Shipping Information:

DOT Proper Name:	Hydrogen Chloride, Anhydrous
Hazard Class:	2.3
I.D. Number:	UN 1050
Labels:	Poison Gas, Corrosive

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 5.0 (Research)	HCL-50-XX	99.999%	Total Impurities (Nitrogen, Oxygen, CO, CO ₂ , Total Hydrocarbons)	< 10 ppm	400 series stainless steel regulator see page 4.18
PurityPlus 4.5	HCL-45-XX	99.995%	Total Impurities (Nitrogen, Oxygen, CO, CO ₂ , Total Hydrocarbons)	< 50 ppm	400 series stainless steel regulator see page 4.18
PurityPlus 4.0	HCL-40-XX	> 99.99%	Total Impurities	< 100 ppm	400 series stainless steel regulator see page 4.18
PurityPlus 2.0 (Technical)	HCL-20-XX	> 99%	Total Impurities	< 1.0%	400 series stainless steel regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. HCL-50-200)

Standard Cylinder Sizes *	Contents lbs	Cylinder Pressure PSIG	CGA Valve Connection
200	60	613	330
80	20	613	330
30	8	613	330

*Nonstandard cylinder sizes available upon request

A colorless, flammable, toxic gas with the odor of rotten eggs.

Hydrogen Sulfide

Technical Information:	
Chemical Symbol:	H ₂ S
Molecular Weight:	34.08
Specific Volume	11.2 ft ³ /lb (0.69 m ³ /kg)
CAS Registry Number:	7783-06-4

Shipping Information:	
DOT Proper Name:	Hydrogen Sulfide, Liquefied
Hazard Class:	2.3
I.D. Number:	UN 1053
Labels:	Poison Gas, Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.5 (Chemically Pure)	H2X-25-XX	> 99.5%	Total Impurities	< 0.5%	400 series stainless steel regulator see page 4.18 408 series aluminum regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. H2X-25-400)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
400	170	252	330
200	60	252	330
80	20	252	330

*Nonstandard cylinder sizes available upon request

Isobutane

A colorless, flammable gas.

Technical Information:

Chemical Symbol:	C ₄ H ₁₀
Molecular Weight:	58.12
Specific Volume	6.5 ft ³ /lb (0.40 m ³ /kg)
CAS Registry Number:	75-28-5

Shipping Information:

DOT Proper Name:	Isobutane
Hazard Class:	2.1
I.D. Number:	UN 1969
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 4.0 (Research)	ISB-40-XX	> 99.99%	Total Impurities	< 100 ppm	3700 HP series LP gas regulator see page 4.60
PurityPlus 2.5 (Instrument)	ISB-25-XX	> 99.5%	Total Impurities	< 0.5%	
PurityPlus 2.0 (Chemically Pure)	ISB-20-XX	> 99%	Total Impurities	< 1.0%	
PurityPlus R600a (Liquid Phase Withdrawal)			UL Certified		

XX - Complete the part number with the desired cylinder size listed below. (ie. ISB-25-350)

Standard Cylinder Sizes *	Contents lbs	Cylinder Pressure PSIG	CGA Valve Connection
350	116	31	510
LP20	20	31	510

*Nonstandard cylinder sizes available upon request

A colorless, flammable, liquefied gas, having a coal gas odor.

Isobutylene

Technical Information:	
Chemical Symbol:	C ₄ H ₈
Molecular Weight:	56.11
Specific Volume	6.7 ft ³ /lb
CAS Registry Number:	115-11-7

Shipping Information:	
DOT Proper Name:	Isobutylene
Hazard Class:	2.1
I.D. Number:	UN 1055
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 3.0	IBU-30-XX	99.9% Gas Phase	Other Hydrocarbons Sulfur Moisture Total impurities	< 0.1% < 1 ppm < 5 ppm < 0.1%	202 series brass regulator Series 8500 stainless steel manual control valve

Isopentane

A colorless, flammable liquid having a mild gasoline odor.

Technical Information:

Chemical Symbol:	C ₅ H ₁₂
Molecular Weight:	72.15
Specific Volume	Not Applicable
CAS Registry Number:	78-78-4

Shipping Information:

DOT Proper Name:	Pentanes
Hazard Class:	3
I.D. Number:	UN 1265
Labels:	Flammable Liquid

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.5	IPT-25-XX	99.5% Gas Phase	Other Hydrocarbons Sulfur Moisture Total impurities	< 0.5% < 1 ppm < 5 ppm < 0.5%	202 series brass regulator Series 8500 stainless steel manual control valve

Methane

A colorless, odorless, tasteless, flammable gas.

Technical Information:	
Chemical Symbol:	CH ₄
Molecular Weight:	16.04
Specific Volume	23.7 ft ³ /lb (1.47 m ³ /kg)
CAS Registry Number:	74-82-8

Shipping Information:	
DOT Proper Name:	Methane, Compressed
Hazard Class:	2.1
I.D. Number:	UN 1971
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 5.0 (Research)	MET-50-XX	> 99.999%	Total Impurities	< 10 ppm	300 series brass regulator see page 4.12

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
10	0.25	538	350

*Nonstandard cylinder sizes available upon request

A colorless, flammable, potentially harmful, liquefied gas. **Methyl Mercaptan**

Technical Information:	
Chemical Symbol:	CH ₃ SH
Molecular Weight:	48.1
Specific Volume	8.0 ft ³ /lb (0.499 m ³ /kg)
CAS Registry Number:	74-93-1

Shipping Information:	
DOT Proper Name:	Methyl Mercaptan
Hazard Class:	2.3
I.D. Number:	UN1064
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.5 (Chemically Pure)	MEM-25-XX	> 99.5%	Total Impurities	< 0.5%	Series 3920 stainless steel lecture bottle regulator see page 4.40

XX - Complete the part number with the desired cylinder size listed below. (ie. MEM-25-XX)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
LB	0.5	15	110

*Nonstandard cylinder sizes available upon request

Monomethylamine (MMA)

A colorless, toxic, flammable, alkaline, liquefied gas.

Technical Information:	
Chemical Symbol:	CH ₃ NH ₂
Molecular Weight:	31.06
Specific Volume	12.1 ft ³ /lb (0.755 m ³ /kg)
CAS Registry Number:	74-89-5

Shipping Information:	
DOT Proper Name:	Methylamine, Anhydrous
Hazard Class:	2.1
I.D. Number:	UN1061
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.5 (Chemically Pure)	MMA-25-XX	> 99.5% Liquid Phase	Total Impurities	< 0.5%	400 series stainless steel regulator see page 4.18

XX - Complete the part number with the desired cylinder size listed below. (ie. MMA-25-350)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
350	125	29	705
LB	0.375	29	180

*Nonstandard cylinder sizes available upon request

A colorless, odorless, nonflammable, inert gas.

Neon

Technical Information:	
Chemical Symbol:	Ne
Molecular Weight:	20.18
Specific Volume	19.2 ft ³ /lb (1.19 m ³ /kg)
CAS Registry Number:	7440-01-9

Shipping Information:	
DOT Proper Name:	Neon, Compressed
Hazard Class:	2.2
I.D. Number:	UN 1065
Labels:	Nonflammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended

*Nonstandard cylinder sizes available upon request

Neopentane (Dimethylpropane)

A colorless, flammable, liquefied gas.

Technical Information:	
Chemical Symbol:	C ₅ H ₁₂
Molecular Weight:	72.15
Specific Volume	5.30 ft ³ /lb (0.330 m ³ /kg)
CAS Registry Number:	463-82-1

Shipping Information:	
DOT Proper Name:	2,2-Dimethylpropane
Hazard Class:	2.1
I.D. Number:	UN2044
Labels:	Flammable Gas

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 2.0 (Chemically Pure)	NPT-20-XX	> 99.0%	Total Impurities	< 1%	3700 HP series LP gas regulator see page 4.60

XX - Complete the part number with the desired cylinder size listed below. (ie. NPT-20-LPS)

Standard Cylinder Sizes *	Contents lbs.	Cylinder Pressure	CGA Valve Connection
LPS	5	7 psig	510

*Nonstandard cylinder sizes available upon request

A colorless, nonflammable, toxic, oxidizing gas with an irritating odor. **Nitric Oxide**

Technical Information:	
Chemical Symbol:	NO
Molecular Weight:	30.01
Specific Volume	12.9 ft ³ /lb (0.80 m ³ /kg)
CAS Registry Number:	10102-43-9

Shipping Information:	
DOT Proper Name:	Nitric Oxide, Compressed
Hazard Class:	2.3
I.D. Number:	UN 1660
Labels:	Poison Gas, Oxidizer, Corrosive

Grade	Part No.	Purity	Impurity	Specification	Equipment Recommended
PurityPlus 3.0	NOX-30-XX	> 99.9%	Total Impurities	< 1000 ppm	400 series stainless steel regulator see page 4.18

Ammonia	2.3
Argon	2.4 – 2.7
n-Butane	2.8 – 2.10
Carbon Dioxide	2.11 – 2.14
Carbon Monoxide	2.15 – 2.16
Ethane	2.17 – 2.18
Ethylene	2.19 – 2.20
Helium	2.21 – 2.22
Hexane	2.23
Hydrogen	2.24 – 2.27
Hydrogen Sulfide	2.28
Isobutane	2.29 – 2.30
Methane	2.31 – 2.34
Nitric Oxide	2.35
Nitrogen	2.36 – 2.38
Nitrogen Dioxide	2.39
Nitrous Oxide	2.40
Oxygen	2.41 – 2.42
n-Pentane	2.43
Propane	2.44 – 2.45
Propylene	2.46 – 2.47
Sulfur Dioxide	2.48 – 2.49
Sulfur Hexafluoride	2.50 – 2.51
Three Component Mixtures	2.52

Mixed Gases

Our independently audited and certified laboratories use high accuracy scales combined with the state-of-the-art cylinder preparation techniques to ensure the most accurate and stable mixtures in the industry.

Our laboratories also employ the most sensitive instrumentation and certified reference gases to accurately analyze all of the raw materials used in the manufacture of our mixed gases. This allows for the correction of any cross contamination and ensures that our customers receive the most accurate mixtures possible. This is especially important in hydrocarbon mixtures where impurities can alter the final composition of a mixture.

We offer several grades of mixtures:

PRIMARY STANDARD GRADE - precisely blended mixtures using the most advanced gravimetric techniques, resulting in the highest accuracy of gas mixtures available. NIST traceable weights are used to calibrate the high precision scales.

CERTIFIED STANDARD – calibration gases prepared with high-accuracy gas blending systems, using gravimetric or partial pressure methods. They are then analyzed against Primary Reference Standards, the results of which are reported on the Certificate of Analysis (COA).

CUSTOM MIXTURES – process gas standards that are prepared in the same fashion, and to the same specifications as the Certified Standards, but the analysis is not reported. The requested composition is reported on the label.

ENVIRONMENTAL MIXTURES – high accuracy reference gas mixtures used for the calibration of emission monitoring equipment. These mixtures are manufactured to stringent EPA specifications and procedures to maximize stability and shelf life. NIST traceable Reference Materials are used to certify these mixtures.

Dynamic blending and batch analyses are also available for multiple cylinder batches. Please contact us for more details.

AVAILABLE ANALYSES

Component Analysis – the determination of the concentration of each minor component in the requested mixture. - Results reported on the COA.

Specific Impurity Analysis – determination of the concentration of a specific impurity of concern. - Results reported on the COA.

We can prepare a wide variety and quantity of gases, such as 15 component hydrocarbon mixtures. There may be restrictions in the preparation of some mixtures. For example:

- Components that chemically react, even under limited conditions, will not be mixed together. Mixtures of fuels and oxidizers are given special consideration. Limits are determined by the fuel's lower explosive limit in an oxidizer, as well as the potential energy contained in the mixture.
- If a requested mixture contains a liquefied gas, such as propane, the final pressure of the mixture may be limited to prevent condensation of the component in the cylinder. Condensation of a component would result in separation of the component and the mixture would not be stable.

If there are any questions or concerns, our technical staff is available to assist you in selecting a mixture or series of mixtures to meet your needs. Please contact your nearest PurityPlus sales office with any issue that you may have.

MIXTURE SPECIFICATIONS:

There are two considerations used to determine the mixture grade required, the Mixture Preparation Tolerance and the Analytical Certification Tolerance.

Mixture Preparation Tolerance is the variation of a component from the requested concentration. Tighter tolerance requirements such as in the Aerospace or Electronics industries require Primary Standard grade mixtures. Other requirements, such as process monitoring operations can use the Custom Grade gas mixtures, where only the requested concentration is reported on the label. Whatever your gas requirements may be, you can be assured that our technicians will use the proper care and techniques in the manufacture of your mixture.

Mixture Preparation Tolerance			
Requested concentration	Primary Standard	Certified Standard	Custom Mixture
0.1-50%	± 1% of requested concentration	± 2% of requested concentration	Custom Mixtures are manufactured to the same Mixture Preparation Tolerances as our Certified Standard. However, the analysis is not reported and the mixture is labeled with the requested value.
10-999 PPM	± 5% of requested concentration	± 10% of requested concentration	
1-10 PPM	± 10% or requested concentration	± 20% of requested concentration	

Analytical Certification Tolerance, is the term used to indicate the level of certainty of an analysis. Any analytical measurement has a small amount of acceptable variation in the results. The higher accuracy methods of analysis have less variation. The Primary Standard Grade has the highest accuracy and the certainty is within ± 200 PPM for components greater than 2.0%. Please contact us if you have any questions as to which is the right mixture for your requirement.

Analytical Certification Tolerance			
Requested concentration	Primary Standard	Certified Standard	Custom Mixture
0.1-50%	± 1% of reported concentration or 0.02% absolute, whichever is smaller	± 2% of reported concentration	Custom Mixtures are manufactured to the same Mixture Preparation Tolerances as our Certified Standard. However, the analysis is not reported and the mixture is labeled with the requested value.
10-999 PPM	± 1% of reported concentration	± 5% of reported concentration	
1-10 PPM	± 0.1 PPM of reported concentration	± 10% of reported concentration

Three Component Mixtures

Primary Standard, Certified Standard, and Custom Mixture grades are available in a wide variety of gas combinations from two components to fifteen components or more. Listed below are common minor components in a variety of balance gases. For additional components, or for components not listed in the tables, contact the nearest sales office.

The cylinder pressure, cylinder contents, CGA connections, and recommended equipment will vary according to the gases and gas concentrations in the final mixture. Please contact the nearest sales office for the specific details of your mixture.

Minor Components			
Argon	Ethane	Isobutane	Oxygen
Butane	Ethylene	Methane	Propane
Carbon Dioxide	Helium	Nitrogen	Propylene
Carbon Monoxide	Hydrogen	Nitrous Oxide	

Balance Gases	
Air	Nitrogen
Argon	Oxygen
Hydrogen

Beverage and Food Gases

3

Carbonation

Many of the most popular beverages are soft drinks supplied with carbonation. To maintain the intricate taste of the drinks, high quality carbon dioxide is required. When carbon dioxide is dissolved into a water based liquid, it reacts with the water to form carbonic acid. This carbonic acid exists in equilibrium with the carbon dioxide and participates in the flavor of the product. The carbon dioxide must be of the highest quality to prevent undesirable flavors from being introduced into the product. PurityPlus use only the highest quality products and the most advanced manufacturing techniques to ensure product consistency.

Sparkling beverages where carbon dioxide is a by-product of the fermentation process can also be enhanced with beverage gases. Additional carbon dioxide can be added to these beverages. Pure carbon dioxide is used for wine, but a mixture of carbon dioxide and nitrogen can be used with beer to improve pressurization and dispensing. These mixtures are also used to control the “head” on the beer. The higher the nitrogen content, the flatter the product will be in the glass.

Food Freezing and Chilling

To improve flavor and shelf life, many of today's food products are frozen very quickly. Liquid carbon dioxide and liquid nitrogen can be used to increase the speed at which food products are frozen. Faster freezing reduces the product's core temperature thereby maintaining flavor, increasing shelf life, and reducing processing time, and increasing food safety. This is also true for products that are quick chilled, without actually freezing of the product.

Fish Hatcheries

Dissolved oxygen is important for the survival of hatchery raised fish and crustaceans. High concentration of animals along with naturally occurring algae can act to reduce the oxygen needed for survival. Adding oxygen to the water can increase the survivability of the animals. This is also true when transporting live animals.

Modified Atmosphere Packaging

Aerobic bacteria, molds, and oxygen can cause undesirable changes in foods. Food can become at best, unpalatable, or at worst, unsafe for consumption due to these processes. Use of Modified Atmosphere Packaging (MAP), with specially designed packaging, can extend the shelf life of some food products by slowing or preventing or slowing the reaction with oxygen, or preventing or slowing the growth of micro organisms.

The gases used in this process are primarily oxygen, nitrogen, and carbon dioxide. In special instances, carbon monoxide and the noble gases are also used.

Oxygen can be both detrimental as well as beneficial to packaged food items. Oxygen can cause oxidation of fats and pigments. Oxygen also supports the growth of aerobic micro organisms which are the primary cause of spoilage. On the other hand too little oxygen will cause deleterious changes in the coloration of meats. In addition, too little oxygen can also allow for the growth of anaerobic bacteria which can cause food poisoning. For these reasons, the oxygen concentration must be carefully controlled.

Beverage and Food Gases

3

Nitrogen is a non-reactive gas that does not support the growth of aerobic micro organisms and thus can inhibit the growth of spoilage bacteria. Nitrogen, however, does not effect the growth of anaerobic micro organisms. Since nitrogen does not react or dissolve into food products, it is also used to prevent package collapse caused by the absorption of other MAP gases.

Carbon dioxide is an acid gas. It readily dissolves into water and produces carbonic acid, thereby decreasing the pH of a solution. Carbon dioxide is also soluble in organic compounds and fats. Carbon dioxide does inhibit the growth of some pathogenic bacteria and is an important addition to many MAP gas mixtures. Unfortunately, too much carbon dioxide can lead to package collapse due to the absorption of carbon dioxide by the food product or permeation through the packaging. If package collapse is not desirable, nitrogen can be added to the MAP mixture to prevent or minimize collapse.

Carbon monoxide is a very flammable, reactive, and toxic gas. However, small amounts of carbon monoxide will enhance desirable pigmentation of red meat. Carbon monoxide is also used to prevent browning of packaged lettuce. Care must be taken when dealing with this flammable and toxic gas.

Other gases that can be added to MAP gas mixtures are the noble gases. These gases are truly non-reactive gases. They include **helium**, **argon**, **krypton**, and **xenon**. These gases have similar actions as nitrogen. Argon is used to extend the shelf life of several fruits and berries.

Depending on volume requirements, MAP gases are supplied premixed in size 300 cylinders. For larger volumes, micro and mini-bulk installations are available. Please contact our technical staff for additional information and consultation regarding your specific requirements.

Biological Atmosphere Gas Mixtures

3

These mixtures are used as control atmospheres for the growth of aerobic and anaerobic biological cultures. Anerobic cultures thrive when deprived of oxygen. These gas mixtures contain less than 10 PPM of oxygen. Aerobic cultures require oxygen to survive. COA not included.

Portable Calibration Standards

3

Refillable, Portable Calibration Gases

The portable calibration gas cylinder is an alternative to standard disposable cylinders. The Enviro-Cyl™ calibration gas cylinder offers many advantages over disposables:

- portable light weight refillable
- economical 50 - 100% more capacity than disposables
- no cylinders to dispose of...simply return for refill
- eliminates disposal fees and regulatory paperwork
- no more problems with landfills or recycling
- cost efficient; no deposits or rental fees

Portable Calibration Standards

3

One Timers are perfect for all your calibration applications. They cover a broad range of applications from industrial hygiene to petrol chemical.

One Timers provide outstanding quality, performance, and value. They also eliminate cylinder rental and demurrage charges, and the added portability of these cylinders makes them perfect for small jobs.

103 Liter Steel Disposable Cylinder for Non-Reactive Gas

- Steel disposable
- 103 liter low pressure capacity
- Cylinder height: 13.77"
- Cylinder diameter: 3.27"
- CGA: C-10 5/8" - 18 UNF
- Contents: 103 liters
- Weight: 2.3 lbs
- Service pressure: 1000 psi
- DOT Specs: 39 steel cylinder

34 Liter Steel Disposable Cylinder for Non-Reactive Gas

- Steel disposable
- 34 liter low pressure capacity
- Cylinder height: 10.75"
- Cylinder diameter: 3"
- CGA: 600
- Contents: 34 liters
- Weight: 1.8 lbs
- Service pressure: 500 psi
- DOT specs: 39 steel cylinder

17 Liter Steel Disposable Cylinder for Non-Reactive Gas

- Steel disposable
- 17 liter low pressure capacity
- Cylinder height: 10.75"
- Cylinder diameter: 3"
- CGA: 600
- Contents: 17 liters
- Weight: 1.1 lbs
- Service pressure: 250 psi
- DOT specs: 39 steel cylinder

58 Liter Aluminum Disposable Cylinder for Reactive Gas

- Aluminum disposable
- 58 liter low pressure capacity
- Cylinder height: 14.25"
- Cylinder diameter: 3.5"
- Outlet Fitting: C-10 5/8" 18 UNF
- Contents: 58 liters
- Weight 1.6 lbs
- Service pressure: 500 psi
- DOT specs: 39 NRC aluminum cylinder

29 Liter Aluminum Disposable Cylinder for Reactive Gas

- Aluminum disposable
- 29 liter low pressure capacity
- Cylinder height: 10.64"
- Cylinder diameter: 3"
- Outlet Fitting: C-10 5/8" 18 UNF
- Contents: 34 liters
- Weight 1.3 lbs
- Service pressure: 500 psi
- DOT specs: 39 NRC aluminum cylinder

Portable Calibration Standards

3

All Portable Gas Standards are manufactured to meet certified standards and are manufactured with NIST traceable standards. These standards are also manufactured under ISO 17025 Quality Requirements.

Confined Space Standards

Entry into confined spaces require testing for several contaminants.

4 & 5 Component Mixtures normally contain the following products, but the minor components can vary. The concentrations of these components can vary according to the equipment manufacturer. Please check with your equipment manufacturer as to the exact mixture you need.

5 Component Mixture	Part No.	4 Component Mixture	Part No.
Hydrogen Sulfide Carbon Monoxide Methane Oxygen Balance Nitrogen	CS-5-NIT-XX-DN	Hydrogen Sulfide Carbon Monoxide Methane Balance Nitrogen	CS-4-NIT-XX-DN

Common Environmental Compliance Mixtures

Environmental Compliance Mixtures are primarily for remediation and testing. These are normally just two component mixtures, but additional minor components are available.

	Part No.		Part No.
Isobutylene Balance Air	CS-2-AIR-XX-DN	Carbon Monoxide Balance Air	CS-2-AIR-XX-DN

Flame Ionization Fuel Mixtures

3

These mixtures are used with Flame Ionization Detectors (FIDs) in gas chromatography or Total Hydrocarbon Analyzer (THC) when analyzing for trace quantities of hydrocarbons. Please refer to the Pure Gas section for Zero and Hydrocarbon Free grades of air, argon, helium, hydrogen, nitrogen, and oxygen carrier gases.

FID Fuel	Part No.	Cylinder Size	Contents	Connection
40% Hydrogen	FID-2-NIT-XX-DN	300	266 cf	350
60% Nitrogen		200	203 cf	350
40% Hydrogen	FID-2-HEL-XX-DN	300	259 cf	350
60% Helium		200	195 cf	350

XX - Complete the part number with the desired cylinder size listed above.

DN - Description number assigned by manufacturing location.

Recommended Equipment

300 series brass regulators, see page 4.12

Leak Detection Mixtures

Leak detection mixtures are used with special instrumentation designed to detect the minor component at very low concentrations. The primary use is to detect very minute leaks in gas systems.

Leak Detection Mixtures	Part No.	Cylinder Size	Contents	Connection
.5%-10% Helium	LDM-2-NIT-XX-DN	300	285	580
Balance Nitrogen		200	210	580
50ppm-1% Sulfur Hexafluoride	LDM-2-NIT-XX-DN	300	289	580
Balance Nitrogen		200	213	580
1%-5% Sulfur Hexafluoride	LDM-2-NIT-XX-DN	300	292	580
Balance Nitrogen		200	215	580

XX - Complete the part number with the desired cylinder size listed above.

DN - Description number assigned by manufacturing location.

Recommended Equipment

300 series brass regulators, see page 4.12

Laser Mixtures

3

Source Material Purities::	
Carbon Dioxide:	99.995%
Nitrogen	99.999%
Helium	99.999%
Carbon Monoxide:	99.5%
Hydrogen	99.99%

The concentration of the minor components in the mixture shall be within +/- 5% relative of the requested concentration. Tighter blend tolerances, and specific certifications are available.

Carbon Dioxide Laser Mixtures	Part No.	Cylinder Size	Contents	Connection
3.4% CO ₂ / 15.6% N ₂ / He 4.5% CO ₂ / 13.5% N ₂ / He 6% CO ₂ / 18% N ₂ / He 4.5% CO ₂ / 13.5% N ₂ / He 5% CO ₂ / 40% N ₂ / He	LZR-4-HEL-XX-DN LZR-4-HEL-XX-DN LZR-3-HEL-XX-DN LZR-3-HEL-XX-DN LZR-3-HEL-XX-DN	300 200	264 cf 200 cf	580

Recommended Equipment

601 series laser regulator, see page 4.56

*Other combinations and sizes available upon request

TCD Carrier Gas Mixture

3

This mixture is intended to enhance the sensitivity of a chromatograph using a thermal conductivity detector.

TCD Carrier Gas Mixture	Part No.	Cylinder Size	Contents	Connection
8.5% Hydrogen	TCD-2-HEL-XX-DN	300	262 cf	350
91.5% Helium		200	192 cf	350

XX - Complete the part number with the desired cylinder size listed above.

DN - Description number assigned by manufacturing location.

Recommended Equipment

300 series brass regulators, see page 4.12

Spark Chamber Mixtures

Used as the medium for atomic particle studies.

Spark Chamber Mixtures	Part No.	Cylinder Size	Contents	Connection
10% Helium 90% Neon	SCM-2-NE-XX-DN	300	269	580
		200	201	580
		150A	135	580
20% Helium 80% Neon	SCM-2-NE-XX-DN	300	269	580
		200	201	580
		150A	135	580
25 % Helium 75% Neon	SCM-2-NE-XX-DN	300	269	580
		200	201	580
		150A	135	580

XX - Complete the part number with the desired cylinder size listed above.

DN - Description number assigned by manufacturing location.

Recommended Equipment

300 series brass regulators, see page 4.12

Multi-Component Hydrocarbon Mixtures

3

Today's gas and oil industries are more demanding than ever. With critical specifications and tolerances tighter than ever, it is imperative, for continued top level operation, that **gas and liquid standards** be manufactured with the highest quality gases in the highest quality labs. Our hydrocarbon gases are manufactured to meet the most stringent requirements that our customers demand. Whether your hydrocarbon requirement is for a refinery, petrochemical plant, chemical plant, or gas processing plant you can depend on PurityPlus gases to meet your processing challenges with reliable gas standards the first time, every time. Five, ten, twenty or more components mixtures are routine for us. For pricing and delivery, please contact the nearest sales office with your mixture requirements.

Typical reference standards can include any or all of the following gases.

Argon	Hydrogen Sulfide
Benzene	Isobutane
1-3 Butadiene	Isobutylene
n-Butane	Isopentane
cis-2-Butene	Isoprene
trans-2-Butene	Methane
1-Butene	2-Methylpentane
Carbon Dioxide	3-Methylpentane
Carbon Monoxide	Nitrogen
Cyclohexane	n-Nonane
Cyclopentane	n-Octane
n-Decane	n-Pentene
2,2 Dimethyl butane	Propane
n-Dodecane	Propylene
Ethane	Neopentane
Ethylene	n-Tridecane
Helium	n-Undecane
n-Heptane	

Recommended Equipment

300 series brass regulators, see page 4.12

*For mixtures containing hydrogen sulfide:
400 series stainless steel regulators, see
page 4.18

Liquid Hydrocarbon Mixtures

3

Liquid Hydrocarbon Standards are often required for analysis of liquid petroleum gas or liquefied hydrocarbon streams. PurityPlus liquid hydrocarbon standards are available in low pressure cylinders with dual valves and/or full length eductor tubes. When the composition of these mixtures span a wide range of vapor pressures and boiling points, we recommend the use of Welker Piston Cylinders to provide constant supply pressure and limit fractionalization of the mixture. These cylinders can supply up to 3600 PSI working pressure by applying equivalent nitrogen pressure to the gas side of the piston, thus maintaining the pressure and mixture you need. This cylinder is available in several volumes and can be refilled.

Please contact your nearest sales office for pricing of mixtures and cylinders.

Welker Engineering Constant Pressure Sample Cylinder
style cp-42-ga

Welker Engineering High Pressure DOT Cylinder
style cp2-hp

Semiconductor Gases

3

PurityPlus gas manufacturers are committed to the semiconductor industry with the implementation of our ISO Quality Management Program. From silanes to dopant gases to etchant gases and purge gases, the network of PurityPlus manufactures have implemented the strict SOPs and QA procedures to meet the semiconductor industry demands. The table below outlines the available process gases. For detailed information, please contact the nearest sales office.

PurityPlus gas manufacturers have been supplying electronic grade gases to the semi-conductor industry since its inception. We currently supply bulk hydrogen, nitrogen, argon, and oxygen to many semiconductor manufacturers. We also supply cylinder gases to the exacting demands of this industry. If you have an electronic gas requirement please contact us for pricing and availability.

Silanes	Dopants	Etchants	Purge Gases	Other
Silane - SiH ₄	Arsine - AsH ₃	Chlorine - Cl ₂	Argon - Ar	Ammonia - NH ₃
Dichlorosilane - SiH ₂ Cl ₂	Phosphine - PH ₃	Hydrogen Bromide - HBr	Helium - He	Carbon Dioxide - CO ₂
Disilane - SiH ₆	Boron Trifluoride - BF ₃	Hydrogen Chloride - HCl	Hydrogen - H ₂	Nitrous Oxide - N ₂ O
Silicon Tetrachloride - SiCl ₄		Sulfur Hexafluoride - SF ₆	Nitrogen - N ₂	
Trichlorosilane - SiHCl ₃		Halocarbon 14 - CF ₄	Oxygen - O ₂	
		Halocarbon 22 - CHClF ₂		
		Halocarbon 23 - CHF ₃		
		Halocarbon C318 - C ₄ F ₈		

Recommended Equipment

432 series regulator, see page 4.24

Medical Gases

PurityPlus Medical Gases are manufactured in compliance to FDA current Good Manufacturing Practices (cGMPs). Our manufacturing facilities are independently audited by a third party auditor, as well as by the FDA (in Canada, the Health Products and Food Branch Inspectorate - HPFBI) to insure stringent compliance with all applicable regulations.

Our Medical Gases are manufactured to meet all U.S. Pharmacopeia (USP) and National Formulary (NF) specifications in accordance with cGMPs.

IWDC Members provide a full range of gases and related equipment for the Healthcare, Pharmaceutical, and Biotechnology fields. We use state-of-the-art filling facilities and analytical laboratories to provide high purity gases and high accuracy mixtures for all research, inhalation, and diagnostic applications.

We carry a full line of cryogenic equipment including cryogenic freezers, liquid withdrawal devices, and personal safety equipment. We have a full line capability from portable liquid containers, to micro and mini-bulk systems, to large bulk gas installations.

Included in this section are the most common medical gases and medical gas mixtures. Depending on use, special request mixtures may require additional approvals.

How to Choose a Regulator

While all regulators can reduce pressure in a gas system, PurityPlus high purity regulators conform to very exacting standards of pressure control. Below, we discuss some bases of comparison that can help you navigate this catalog and choose a regulator that best suits your needs. Of course, your nearest PurityPlus sales office would be happy to answer any further questions you may have about regulator design and operation.

Single Stage vs. Dual Stage

Single stage regulators reduce pressure in a single step to deliver a pressure within a specific range. Regulators designed in this way will show a slight variation in delivery pressure as the cylinder pressure falls during use. For this reason, single stage regulators are best suited for applications where a constant outlet pressure is not critical, where an operator can monitor and readjust pressure, or where inlet pressure is constant.

Dual stage regulators perform the same function as single stage regulators. However, delivery pressure remains constant as cylinder pressure decreases and greater accuracy in pressure control is maintained because the pressure reduction is performed in two steps. Dual stage regulators are recommended for applications requiring a constant outlet pressure over the life of a gas cylinder.

Helium Leak Integrity

Helium leak integrity is a measure of how well a regulator prevents gases from leaking into or out of a regulator body. The measured quantity is expressed as a flow rate such as 1×10^{-9} cc/sec He (1 billionth of a cc/sec). In this case, a Helium Leak integrity rating of 1×10^{-9} would indicate that the regulator would leak enough gas to fill a cubic centimeter every 33 years. If the rating were 1×10^{-3} the regulator would leak enough gas to fill a cubic centimeter in just 17 minutes.

Helium is used as the test gas because it is chemically inert, it is easy to detect, and it is an extremely small molecule able to pass through the smallest leak. The lower the helium leak specification, the better the regulator will be at preventing leaks into the atmosphere and at minimizing contamination from gases outside the body.

Materials of Construction

The materials of construction for a regulator should be based on the properties and purity of the gas. PurityPlus offers regulators made of brass, aluminum, and 316L stainless steel. Brass is compatible with most of the non-reactive gases. A choice of forged body or barstock construction is available. Forged body regulators are economical; however, their internal surface finishes are relatively rough as compared to barstock body regulators. Barstock body regulators have all wetted surfaces machined to a smooth finish which reduces the possibility of contamination. 316L stainless steel is highly corrosion resistant and is suitable for use with many of the highly corrosive gases in their anhydrous form. Aluminum is an economical lightweight alternative to stainless steel for many of the mildly corrosive gases. Refer to the Regulator Selection Chart on pages 4.3-4.5 or consult your nearest PurityPlus sales office to determine suitable materials of construction.

Cylinder Connections

PurityPlus offers cylinder connections which conform to all worldwide standards. In the US the Compressed Gas Association (CGA) has designated specific cylinder connections for each gas service and pressure rating. Refer to CGA publication V-1 for more information. A few of the international standards PurityPlus provides include DIN 477, BS 341, JIS (Japan), and KS (Korea). Please note that a CGA connection limits the temperature range of a regulator to the guidelines of the connection.

Flow Charts

The flow charts on each catalog page are a graphical representation of test results which show the change in outlet pressure with varying flow rate. To use the chart, determine the maximum no-flow pressure permitted by your system. Locate this pressure on the vertical axis of the chart. If there is no curve for your specific condition, interpolate a curve. Follow the curve to the desired flow rate on the horizontal scale. Read horizontally to the left to determine the corresponding pressure drop. Because flow rate is dependent on inlet pressure, data is presented at full cylinder pressure (2000 PSIG), partially full (500 PSIG) and nearly empty (200 PSIG).

Diaphragms

The diaphragm is a sensing element crucial to the function of the regulator and the purity of gas delivery. Stainless steel diaphragms are corrosion resistant and have low leakage rate characteristics. Neoprene diaphragms may offer more sensitive pressure control, but do not offer the gas purity of stainless steel. Coating a neoprene diaphragm with PTFE enhances gas purity greatly.

Specific Applications

While a single or dual stage regulator of the appropriate material will suffice in most gas service, some applications require specially designed regulators. For example in the 400 Series, the 455 Series regulators are specifically designed for use with highly corrosive gases and the 492 Series regulators can safely deliver gas at extremely high pressures. If you are unsure about your requirements, please contact your IWDC distributor for assistance.

Ordering PurityPlus Regulators

In accordance with our philosophy of flexible design, PurityPlus has developed a versatile modular manufacturing system to accommodate any individual requirement. With all the options PurityPlus offers, listing discrete part numbers for each regulator series would be impossible. Therefore, we have created a part number matrix which allows you to design a regulator to meet the needs of any application.

Step One The first choice in completing the Part Number Matrix is selecting a particular regulator series. Determine which regulator series are compatible with the gases involved in the application by consulting the Regulator Selection Chart on pages 4.3-4.5. For further criteria, consider page 4.1 entitled Choosing a Regulator and finally the description of each regulator series in this catalog. If you are having problems deciding, please contact your nearest PurityPlus sales office for assistance. The regulator series number then becomes the first three digits of the part number.

Step Two Select the desired outlet pressure range from those available in the A column. The selection of an outlet pressure range automatically specifies the outlet pressure gauge which appears in the adjacent column. For example, a regulator with a 0-250 PSIG outlet pressure range will have a 0-400 PSIG pressure gauge installed.

Step Three Choose the inlet pressure gauge from those available in the B column. While the most common cylinder pressure is between 2200 PSIG and 2400 PSIG, several gases are stored in cylinders at other pressures. Choosing the inlet gauge with a range that most closely approximates the actual pressure range of the cylinder allows easy readability of cylinder contents. Please note that by indicating the 0-6000 PSIG inlet gauge, you are also selecting a special PCTFE Capsule® with a maximum inlet pressure of 4500 PSIG.

Step Four Indicate the outlet assembly desired from those available in the C column. Since there are a wide variety of tubing and piping systems in use, the matrix accommodates virtually any style of connection, eliminating the need for adapters and reducing potential leak paths. PurityPlus also offers a choice of valve options for gas flow control.

Step Five Select an assembly option from those available in the D column. A bare body regulator is shipped without peripherals, with all ports open and unplugged. A standard assembly regulator comes completely assembled with all selected peripherals, ready for use; a Cleanroom regulator is completely assembled in a Class 10 environment. Finally, each regulator must pass a battery of rigorous operational tests and a Helium Leak Integrity check.

Step Six Specify an inlet connection. On all regulator series, PurityPlus distributors will provide any CGA, DIN 477, BS 341, or other standard connection provided it is recognized as safe for the materials of construction and pressure rating of the regulator. Consult your nearest PurityPlus sales office for proper selection of the inlet connection. A "-000" at the end of the part number indicates no inlet connection (1/4" female NPT).

Step Seven Choose an installed option from a range of protocol stations and purges. By ordering these options as a component of the part number, PurityPlus can assure the appropriate materials, maximum pressure, and connections of the option chosen.

For example, using the table below to order a 422 Series regulator with an outlet pressure range of 0-50 PSIG, a 0-4000 PSIG inlet pressure gauge, a diaphragm valve with a 1/4" tube fitting, PSIG/kPa pressure gauges, and a CGA 580 connection for Nitrogen service, the part number would be 422-2331-580.

213 Series

dual stage, chrome-plated forged brass body regulator

Description	Typical Applications
<p>The 213 Series regulators deliver non-corrosive, high purity or liquefied gases (up to grad 4.5) for applications requiring constant low pressure control and delivery regardless of supply pressure variations. With delivery pressures as low as 0.1 PSIG (7 mBAR) that can be adjusted in 0.05 to 0.1 PSIG (4 to 7 mBAR) increments in two delivery pressure ranges, the 213 satisfies any high purity application requiring atmospheric pressures below 5 PSIG (350 mBAR).</p> <ul style="list-style-type: none"> • Dual Stage • Chrome-Plated Forged Brass Body • 316L Stainless Steel Diaphragm • Five Port Configuration 	<ul style="list-style-type: none"> • Low pressure inert blanketing of chemicals and fuel tanks • Gas supply purging • Gas system charging • Fuel gas supply control • Calibration gas control

Features	Materials	Specifications

305 Series

single stage, chrome-plated brass barstock regulator

Description	Typical Applications
<p>The 305 Series regulators are specifically designed for use in the medical laboratory for blood gases, laser gases, and other clinical gas applications where minor fluctuations in outlet pressure due to diminishing inlet supply pressure can be tolerated.</p> <p>Custom Calibration In addition to a standard 2-15 LPM flowgauge for Carbon Dioxide in laser applications, CONCOA also offers a custom 2-15 LPM calibration for any non-corrosive gas or mixture. The outlet orifice is sized to the flow requirement for a specific gas using a thermal mass flowmeter.</p>	<ul style="list-style-type: none"> • Blood gases • Laser gases • Medical research • Pharmaceutical manufacturing • University laboratories

420 Series

single stage regulator

Description	Typical Applications
<p>The 420 Series SilcoNert™ regulators are intended for primary pressure control of reactive or corrosive calibration mixtures or pure gases in applications where an extremely inert wetted finish is required. The proprietary non-reactive amorphous silicon finish is significantly more inert than 316L stainless steel and ideally suited for Hydrogen Sulfide, reduced Sulfur, Mercury and PPM to PPB calibration mixtures.</p> <ul style="list-style-type: none"> • Single Stage • SilcoNert™ 1020 Coated Body, Diaphragm, and Internals • Six Port Configuration or Four Port Configuration • Inert Surface Finish and Corrosion Resistance 	<ul style="list-style-type: none"> • Reactive calibration standard • Emissions monitoring • Hydrogen Sulfide PPM to PPB standards • Mercury standards • Sulfur mixtures • Corrosive service

Features	Materials	Specifications
<ul style="list-style-type: none"> • <i>Metal-to-Metal Diaphragm Seal</i> No possibility of gas contamination • <i>Capsule® Seat</i> Increased serviceability and life • <i>SilcoNert 1020 Barstock Body</i> Increased corrosion resistance • <i>Front and Rear Panel-Mountable</i> Versatile system configuration • <i>Pressure Ranges 0-15 to 0-500 PSIG</i> Broad range of applications 	<p><i>Body</i> SilcoNert 1020</p> <p><i>Bonnet</i> SilcoNert 1020</p> <p><i>Seat</i> PTFE</p> <p><i>Filter</i> SilcoNert 1020 10 micron mesh</p> <p><i>Diaphragm</i> SilcoNert 1020</p> <p><i>Internal Seals</i> PTFE</p>	<p><i>Maximum Inlet Pressure</i> 3000 PSIG (210 BAR) 4500 PSIG (310 BAR) optional</p> <p><i>Temperature Range</i> -40°F to 140°F (-40°C to 60°C)</p> <p><i>Gauge</i> 2" (53mm) diameter stainless steel (bourdon tube not SilcoNert 1020)</p> <p><i>Ports</i> ¼" FPT</p> <p><i>Helium Leak Integrity</i> 1 x 10⁻⁹ scc/sec</p> <p><i>Cv</i> 0.1 (Max outlet 50 PSIG or below) 0.2 (Max outlet above 50 PSIG)</p> <p><i>Weight (445 3331-330)</i> 3.8 lbs. Lecture Bottle Equipment (cont.)

Description

Lecture bottles have rounded ends and require some means of support when in use. We provide two types of holders here that meet most requirements.

Non-Tip Stand - Model 475

This stand offers a convenient method of securing a lecture bottle on a table or lab bench. The stand is made of light weight brushed aluminum and, yet the large diameter base provides stability even when a regulator is installed on the bottle.

Wall Mount Lecture Bottle Bracket - Model 480

This bracket is made of powder coated steel and has spring steel clips that provide firm, secure support to the lecture bottle. The bracket is ideal for securing lecture bottles to lab cart or bench set-ups, in carrying cases for portable systems, or in storage cabinets.

Lecture Bottle Control Valves - Models 3990-3993

These valves are specifically designed for attachment to lecture bottles to dispense their contents. They do not control pressure and should only be used when the operator is in attendance.

455 Series

corrosion resistant, electroless nickel-plated forged brass regulator

Description	Typical Applications
<p>The 455 Series regulators are intended for primary pressure control of highly corrosive gases such as chlorides, sulfides, and other acid-forming gases.</p> <p>Deep Purge</p> <p>For safety and corrosion prevention, CONCOA highly recommends the addition of a Deep Purge assembly to the 455 Series regulator. Completely purging a system prevents the release of hazardous gases into the work place. In addition, the Deep Purge prevents the introduction of moisture to the regulator which forms acids in the body and results in corrosion.</p> <ul style="list-style-type: none"> • Single Stage • Electroless Nickel-Plated Forged Brass Body • Corrosive Service 	<ul style="list-style-type: none"> • Hydrogen chloride • Chlorine • Boron trichloride • Hydrogen sulfide • Dichlorosilane

601 Series

high purity, two stage brass barstock regulator

Description	Advanced Features	
The 601 Series dual-stage regulator was designed with beam-mode quality in mind. The 601 offers M ² technology that virtually eliminates atmospheric contamination during a cylinder change. Low level moisture and hydrocarbon contents yield a more stable emission and higher resonator efficiencies which makes the 601 Series the right choice.	<ul style="list-style-type: none"> • <i>Machined Brass Barstock Body</i> Smooth surface finish • <i>Low Wetted Surface Area</i> Minimal purge requirements • <i>Convuluted 316L Diaphragm</i> No inboard diffusion • <i>Optional Integral Purge</i> Eliminates atmospheric contamination 	<ul style="list-style-type: none"> • <i>10-Micron Filtration in Both Stages</i> Reduces particle contamination • <i>Optional CGA Check Valve</i> Minimizes atmosphere exposure • <i>Optional Pressure Cycle Purge</i> Eliminates dead-space contaminate • <i>Capsule Seat</i> Increase serviceability and life

3550 Series

economical, corrosive gas, high purity two stage regulator

Description	Advanced Features	Typical Applications
The Series 3550 two stage regulators are designed and constructed for use with reactive and corrosive gases and gas mixtures. While compact in design these regulators provide outstanding performance, comparable to most larger diaphragm competitive models. The monel® diaphragms, inlet filter, poppets and nozzle assemblies installed in a 316L stainless steel body create an economical, high purity, corrosive gas regulator.	<ul style="list-style-type: none"> • Hastelloy® internal parts for added corrosion resistance. • High purity diffusion resistant, metal diaphragm construction on both stages. • Encapsulated seats on both stages. • Diffusion resistant, stainless steel diaphragm packless control valve installed on outlet as standard. • Designed to pass an inboard helium leak-rate test of 1x10⁻⁹ cc per sec. • All parts ultrasonically cleaned prior to assembly. 	The 3550 Series regulators are ideal for critical pressure reduction applications involving higher pressure reactive and/or corrosive gases, where the precise control of pressure or flow is required. They are an excellent choice for use with gas mixtures of such components having a full cylinder pressure of 1000 psig or more.

Warning: A Purge assembly is strongly suggested when using the above regulators with any corrosive gas.

corrosion resistant, single stage, nickel plated brass regulator

3470 Series

4

Description	Advanced Features	Typical Applications
The series 3470 single stage regulators are specifically designed and constructed for use with difficult to handle gases, such as chlorine and hydrogen chloride. The large monel nozzle and Kel-F seat combined with the tied diaphragm assembly greatly reduces the possibility of failure due to creep so common in other corrosive gas regulators. A Teflon-lining on the stainless steel diaphragm forms a protective coating to extend regulator life.	<ul style="list-style-type: none"> Four built-in Kel-F seats provide convenient maintenance and long regulator life. Large Teflon-lined 302 stainless steel diaphragm. Monel valve with Teflon packing installed on outlet. Captured vent bonnet provides for safe venting in the event of a diaphragm failure 	The 3470 Series regulators are ideal for use with many corrosive gases, such as chlorine, hydrogen chloride, boron trichloride, and boron trifluoride. They are also useful for controlling the pressure of high concentration gas mixtures containing these corrosive gas components.

Series 3700HP

single stage, low delivery pressure regulator

Description	Advanced Features	Typical Applications
These regulators were designed to meet the needs of applications requiring reliable low-pressure control while maintaining gas purity. The low pressure stage has a large sensitive aluminum-faced neoprene diaphragm to provide delivery pressures as low as 2" of water.	<ul style="list-style-type: none"> Extremely low delivery pressures. Knob for adjusting delivery pressure. Aluminum faced diaphragm for high purity applications. Maximum inlet pressure 250 psig. Diaphragm packless valve on outlet is standard. 	The Series 3700HP regulators are available in two delivery pressure ranges; 2-35" of water, and 0.5-5 psig. As a line regulator they have a maximum inlet pressure rating of 250 psig. Inlet and outlet connections are 1/4" NPT female. The series 3700HP has an aluminum faced natural rubber diaphragm to provide a diffusion resistant metal barrier for high purity gas applications.

demand flow regulator

Series 3950

4

Description	Features
<p>This new single stage design using balanced valve stem technology is more sensitive than older two stage technologies providing a better performance even with high inlet pressures. This regulator is designed for use with instruments that use a pump to draw the calibration gas into the instrument. The 3950 series demand flow regulator provides the exact amount of calibration gas the instrument pump requires. This simple to use regulator makes calibration quick and easy by eliminating the need for sample bags, flowmeters, or special operator training.</p>	<ul style="list-style-type: none"> • Precise delivery of calibration gas required by instrument pump. • New single stage balanced valve stem technology. • Simple easy to use operation. • Various cylinder connections available: C-10, CGA 600, other CGAs. • 40 micron inlet filter.

Series 3980

adjustable fixed flow regulator

Description	Features
The 3980 series provides the control of the single fixed flow regulators with the advantage of being able to change flow rates as required for different applications. This regulator eliminates the need to have multiple regulators on-site. Commonly called the “click” regulator it has 12 flow positions, OFF, 0.3, 0.5, 1.0, 1.5, 2.0, 2.5, 3.0, 5.0, 6.0, 7.0, and 8.0 slpm. There are models suitable for use with non-corrosive gases and mildly corrosive gases.	<ul style="list-style-type: none"> • 12 fixed flow settings. • 0-3000 psig cylinder pressure gauge. • Max. inlet pressure 3000 psig. • Available with standard C-10 (5/8”-18 UNF) or a standard CGA cylinder connection. • 3/16” hose barb outlet. • 40 micron inlet filter.

fixed flow regulator for non-corrosive gases

Series 3960

Description

These compact regulators are designed to provide a constant fixed flow rate of non-corrosive gases and mixtures from disposable cylinders fitted with a C-10 connection. If required they can also be provided with a standard CGA connection for other types of cylinders.

Features

- Built-in on/off valve.
- Integral inlet and outlet connections provide convenient compact size.
- Outlet orifice and preset delivery pressure provide specific flow rate when on/off valve is opened.
- Pressure gauge monitors cylinder pressure.
- 40 micron inlet filter.

Materials

Body
nickel-plated brass

Piston
brass

Seat
Teflon®

Seals

Series 3962

stainless steel fixed flow regulator for corrosive gases

4

Description

These compact regulators are designed to provide a constant fixed flow rate of gas mixtures containing corrosive gas components from disposable cylinders fitted with a C-10 connection. If required they can also be provided with a standard CGA connection for other types of cylinders.

Features

- Built-in on/off valve.
- Integral inlet and outlet connections provide convenient compact size.
- Outlet orifice and preset delivery pressure provide specific flow rate when on/off valve is opened.
- Pressure gauge monitors cylinder pressure.
- 40 micron inlet filter.

regulator for non-corrosive gases

Series 3970

Description

These compact regulators are designed to provide a constant fixed flow rate of non-corrosive gases and mixtures from disposable cylinders fitted with a CGA 600 outlet connection. They provide both pressure and flow control. When regulator is supplied without 1/4" flow control hose barb the 3970 is an adjustable pressure regulator.

Features

- Adjustable delivery pressure.
- Integral needle valve for shut-off and to control flow.
- Integral CGA 600 connection provides compactness and minimal loss of gas during installation and removal.
- 0-300 psig inlet pressure gauge to monitor cylinder pressure.

PR 150 Single Stage Calibration Gas Regulator

- Non-Corrosive Service
- Inlet Fitting: CGA-600
- Maximum Inlet Pressure: 500 PSIG
- Outlet Flow Settings: .25 LPM, .5 LPM, 1.0 LPM, 1.5 LPM
- Body: Brass Bar Stock
- Spring Housing Cap: Chrome Plated Brass Bar Stock
- Seat: Teflon[®]
- Piston: Brass
- Piston "O" Rings: Buna-N[®]

PR 160 Single Stage Calibration Gas Regulator

- Non-Corrosive Service
- Inlet Fitting: 5/8" - 18 UNF (C-10)
- Maximum Inlet Pressure: 500 PSIG
- Outlet Flow Settings: .25 LPM, .5 LPM, 1.0 LPM, 1.5 LPM
- Body: Brass Bar Stock
- Spring Housing Cap: Chrome Plated Brass Bar Stock
- Seat: Teflon[®]
- Piston: Brass
- Piston "O" Rings: Buna-N[®]

PR 190 Single Stage Click Style Regulator

- Corrosive and Non-Corrosive Service
- C-10, CGA-180
- Multi Flow Capability: .2 LPM, .3 LPM, .5 LPM, 1.0 LPM, 1.5 LPM, 2.5 LPM, 5.0 LPM, 6.0 LPM
- Body: Aluminum
- Spring Housing Cap: Aluminum
- Nozzle: Aluminum
- Seat: KEL-F
- Seals: Nylon
- Inboard Filter: 50 Micron Sintered Stainless Steel

Wall Mount Protocol Station

Description

The 529 Series Protocol Station is a regulator option designed for the convenient wall mounting of any CONCOA high purity regulator. Wall mounting of a regulator provides ease of use, prevents regulator damage and improves safety. The 529 Series Protocol Station is available in chrome-plated brass or 316 stainless steel construction as specified by the regulator series. This option comes complete with a 3 foot long flexible all stainless steel pigtail with armor casing.

4

Wall Mount Protocol Switchover Station

Description

The 529 Series Protocol Purge Station combines all the safety and convenience of a standard Protocol Station with a feature to purge the hose and inlet side of the regulator.

The Protocol Purge Station allows isolation of the regulator inlet and is equipped with a purge valve at the 12 o'clock position on the mounting block with a 1/4" stainless steel tube fitting to safely pipe away the process gas during purging, if required. This station comes complete with mounting block and bracket, two 533 Series diaphragm valves and 3-foot (900 mm) all stainless steel hoses with armor casing. Available in brass, chrome-plated brass, or 316L stainless steel.

Features

- **Regulator Isolation Valve**
Isolates regulator inlet during purging process
- **Purge Valve with 1/4" Compression Tube Fitting**
Allows complete and safe purging of the inlet
- **Integral Check Valve at Inlet of Hose**
Minimizes purging during cylinder change
- **Bracket Mounts**
Attaches conveniently to any surface
- **Connections**
CGA, DIN 477, BS 341 and others available

Flexible Hoses

Description

The 529 Series flexible hoses are intended for use in systems where a flexible connection is preferable to the use of rigid tubing. Most commonly, flexible hoses are used as hoses to connect cylinders to wall-mounted regulators or manifold headers.

Transfer Hoses

Description

Specifically designed for the transfer of cryogenic gases, these all stainless hoses offer complete flexibility, durability and fast cool-down. Machined end connections and a long collar extend the hose life, and low profile corrugations provide faster filling, lower pressure drop and less product loss. Full armor casing protects the hose from abrasion and damage.

542 Series

high flow backup

Description	Typical Applications
<p>The 542 Series High Flow Back-Up is designed to provide a "smart" reserve supply to high flow gas generators or bulk supply systems. If there is a loss of power, or if the gas generator or bulk supply system cannot provide sufficient gas, the 542 Series will automatically activate the reserve supply to supply gas without interruption. The unique feature of the 542 is that these functions are controlled by an on board micro-processor. In addition to the on board systems, the 542 is equipped with CONCOA's new I-Link™ Web server technology allowing for remote monitoring and control functions. Together, these advanced systems continually monitor pipeline pressure and reserves and can be programmed to engage at a specific pressure. The 542 is available for nitrogen, air, helium, carbon dioxide, nitrous oxide, oxygen, or argon in high purity barstock brass construction.</p>	<ul style="list-style-type: none"> • Bulk or microbulk backup supply • Air, Nitrogen, or Oxygen generator backup • Gas chromatography, flame ionization detector, and mass spectrometer backup • Critical laboratory gas reserve • Incubator Carbon Dioxide backup supply

Protocol Switchover Alarm

Description

The 529 Series Protocol Switchover Alarm combines all of the features of the Protocol Switchover Station with the added security of a remote alarm system. The Protocol Switchover Alarm will provide an audio/visible warning when a cylinder is nearly depleted. The system comes complete with Protocol Switchover Station, two 3-foot all stainless steel pigtails with armor casing, two valves (diaphragm, 3,000 PSIG or needle 4,500 or 6,000 PSIG) and remote alarm.

Features	Specifications

	For 220V Protocol Switchover Alarm replace "G" after Part Number with "H"

fully automatic electronic touch screen changeover manifold

AUTO-LOGIC® II

Description

This advanced electronically operated 918 Series AUTO-LOGIC II changeover manifold is fully automatic and provides the user with simple, intuitive operation via a color touch screen. Users can switch from high pressure cylinders on both sides, low pressure cryogenic containers on one side and high pressure cylinders on the other side, or cryogenic containers on both sides with just a few screen touches. Once you have set the operating parameters, you need only to change cylinders as necessary. There is no need to make pressure adjustments or flip a knob after the system has switched from one side to the other. Just replace the empty cylinders and open the valves. The system is now set to change in the opposite direction. The AUTO-LOGIC II capabilities provide customers with a changeover system that suits their current operation and future expanded requirements without having to buy another system.

The 918TS is available with either brass or stainless steel high purity gas components. It has digital pressure readouts for inlet pressures and outlet delivery pressure, built-in alarms, and dry contacts to operate external equipment, such as remote alarms or an auto-dialer. Entire system is housed in a NEMA 4X box.

advanced fully automatic electronic touch screen
changeover manifold - Series 919TS

ULTRA-LOGIC

Description

The 919 Series Ultra-Logic changeover manifold is an advanced version of the AUTO-LOGIC II and provides the user with simple, intuitive operation via a color touch screen. Users can switch from high pressure cylinders on both sides, low pressure cryogenic containers on one side and high pressure cylinders on the other side, or cryogenic containers on both sides with just a few screen touches. Once you have set the operating parameters, you need only change cylinders as necessary. There is no need to make pressure adjustments or flip a knob after the system has switched from one side to the other. Just replace the empty cylinders and open the valves. The system is now set to change in the opposite direction.

The additional Ultra-Logic capabilities provide customers with a changeover system that suits their current operation and future expanded requirements without having to buy another system.

The 919 TS is available with either brass or stainless steel high purity gas components. It has digital pressure readouts for inlet pressures and outlet delivery pressure, built-in alarms, and dry contacts to operate external equipment, such as remote alarms or an auto-dialer. Entire system is housed in a NEMA 4X box.

Features

Specifications

- **Can be controlled via network**
 - **Provides full data logging capability for all functions to aid in 21CFR11 compliance**
 - **Operating parameters are password protected for multiple users**
 - **919TSP provides automatic purging to ensure gas purity on cylinder change outs**
- Plus these features, also available with the Auto-Logic® II*
- Fully automatic, simple, hassle free operation via a large color touch screen
 - Constant digital and graphic gas supplies on both sides
 - Delivery pressure monitor displays any unusual variances
 - High and low adjustable delivery pressure alarm settings
 - Designed for high purity gas service
 - May be used with any type gas source
 - "Leak-Check" monitoring alerts the user to low reserve side pressure of either high pressure or cryogenic containers while in standby via audible and visual alarms
 - "Gas-Check" feature ensures efficient use of gas supplies when cryogenic containers are in service
 - Built-in audio and visual alarm
 - External dry contacts provided to activate optional equipment or remote alarms
 - System housed in NEMA 4X box
 - Available in either brass or stainless steel construction

Max Inlet Pressure
3000 psig

Power required
120 VAC/60Hz

Inlet and Outlet
Connections
1/4" NPT female

microprocessor control electronic switchover system

538 Series

4

Description		Typical Applications
<p>The fully-automatic 538 Series IntelliSwitch II gas switchover is CONCOA's revolutionary new generation of gas management systems. The IntelliSwitch II features a proprietary onboard I-Link web server technology allowing remote monitoring, secure system configuration, and e-mail notification of real-time system status and events. It is ideally suited to interchangeable service/continuous supply in analytical laboratory, chemical process, instrumentation, and critical gas supply applications. The IntelliSwitch II offers continuous gas pressure and flow control from liquid or high pressure cylinder sources. The end user selects the mode of supply by the simple push of a button. Proprietary software logic lowers yearly gas costs by eliminating liquid cylinder vent loss and excess residual return.</p>		<ul style="list-style-type: none"> • High purity, non-corrosive, non-flammable gas supply • Gas chromatograph and mass spec carrier and support gases • Inductively coupled plasma (ICP) and ICP-mass spec continuous gas supply • Incubator Carbon Dioxide and Nitrogen gas supply • Biotech, pharmaceutical and forensic gas systems • Microbulk changeover supply • Central gas supply system for laboratory, research or process plants

microprocessor control electronic switchover system

539 Series

4

Description	Typical Applications
<p>The 539 Series IntelliSwitch is CONCOA's original fully-automatic computer controlled Universal Gas Management System that can provide continuous supply of gas from either cryogenic liquid cylinders or high pressure gas cylinders, or any combination of both. These systems are ideal for use with high purity and ultra high purity gases for laboratory gas chromatography, gas chromatography mass spectrometry, inductively coupled plasma or inductively coupled plasma mass spectrometer support gases as well as for use with Carbon Dioxide or Nitrogen for cell culture incubators. The proprietary software ensures optimal use and savings especially from cryogenic cylinders sources and can greatly reduce or eliminate venting and residual gas return.</p>	<ul style="list-style-type: none"> • High purity non-corrosive non-flammable gas supply • Gas chromatography and mass spec carrier and support gases • Inductively coupled plasma mass spectrometer (ICP-mass spec) continuous gas supply • Incubator Carbon Dioxide and Nitrogen gas supply • Biotech, pharmaceutical and forensic gas systems • Microbulk changeover supply • Central gas supply system for laboratory, research or process plants

Manifold floor stand	830 7437	Supports two standard length 12"(304.8mm) manifold extensions installed consecutively

Description	Typical Applications
<p>The fully automatic 544 IntelliSwitch IIv switches between two gas sources based on a user settable pressure up to 2000 PSIG (137 BAR). The IntelliSwitch IIv features a proprietary onboard I-link webserver technology allowing remote monitoring and secure system configuration and email notification of real time system status and events. It is ideally suited for high delivery pressure requirements over 400 PSIG (27 BAR) or where the pressure control is separate from the switchover system. The 544 series offers full source pressure from the side selected down to whatever switching pressure is desired from 2000 PSIG (137 BAR) down to 100 PSIG (7 BAR), where the system will automatically switch to the reserve supply and supply that inlet pressure to the outlet requirement. The user can select from any model of delivery liquid cylinders to high pressure cylinders. The end user selects the ideal mode of supply by the simple push of a button. Where pressure is controlled by other devices or where pressure control is not required, the 544 provides a reliable and continuous gas supply.</p>	<ul style="list-style-type: none"> • High delivery pressure gas systems • Aerospace cycle testing • Component Helium Leak testing • Synthetic fuel research and process plants • High pressure air systems • Plant pneumatic valve supply

gas generator back-up panel

540 Series

Description

The 540 Series Back-Up Panel is designed to provide a reserve supply to any continuous supply system such as a generator, switchover, or bulk source. If supply is interrupted for any reason, the reserve supply will automatically activate and supply gas without interruption. When the primary source is capable of supplying the system, the reserve shuts down. Back-up panels are available in brass or 316 stainless steel construction. With the available remote alarm package, the system can signal when the reserve supply is active or running low.

Typical Applications

- Generator backup supply
- Gas chromatography, flame ionization detector, and mass spec backup
- Microbulk and bulk backup or reserve
- Critical laboratory gas reserve
- Incubator Carbon Dioxide backup supply

Features

- **Adjustable pressure**
User determines the pressure at which the reserve supplies system
- **Check valves on both generator and reserve**
Prevents back flow to the generator or reserve cylinder
- **Shut-off valves on both generator and reserve**
Allows isolation and disconnection of either line

Materials

Regulator body
Brass or 316L stainless steel barstock

Bonnet
Brass or chrome-plated brass barstock

Seats
PTFE (line regulator)
PCTFE (inlet regulators)

Filter
10 micron sintered bronze mesh or patented 316L stainless steel mesh

Diaphragm and Hose
316L stainless steel

Cylinder Connections
Brass or 316L stainless steel with check valve

Check Valve Seat
Viton®

Panel
304 stainless steel

Specifications

Maximum Inlet Pressure
3000 PSIG (210 BAR)

Temperature Range
-40°F to 140°F (-40°C to 60°C)

Gauges
2" (53mm) diameter brass or 316L stainless steel

Helium Leak Integrity
1 x 10⁻⁹ scc/sec

Two Adjustable Pressure Ranges
0 to 150 PSIG (0 to 10 BAR)
150-500 PSIG (10-34 BAR)

Cv
0.1

Weight
Brass - 6.5 lbs. (2.95 kg)
Stainless steel - 7.25 lbs (3.29 kg)

SilcoNert™ 1020 Switchover

515 Series

4

Description

The 515 Series SilcoNert 1020 is an automatic switchover system designed to deliver a continuous supply of reactive, corrosive, or high purity gases for calibration, instrument support, or process control. The proprietary amorphous Silicon surface finish provides extreme inertness and corrosion resistance over 316L stainless steel. To maintain constant downstream pressure, an integral line regulator option is available.

Typical Applications

- Reactive calibration standard
- Emissions monitoring
- Hydrogen Sulfide and reduced sulfur calibration standards
- Mercury calibration standards
- Low level sulfur in hydrocarbon gas control
- Corrosive gases
- Ultra high purity instrument pure gases

corrosion resistant, semiautomatic changeover

526 Series

Description

The 526 Series Switchover is an automatic switchover system designed to supply a continuous supply of high purity, non-corrosive gas. The system comes with either flexible hoses for use with two cylinders or manifold connectors for use with the Maniflex Modular Manifold System. Due to pressure differential considerations, an integral line regulator is available to maintain constant downstream pressure.

Typical Applications

- Ultra-high purity gases
- Gas chromatograph carrier and support gases
- AA grade acetylene
- Cell culture incubator Carbon Dioxide and Nitrogen
- Pure and mixed process gases
- Central gas supply system for laboratory, research or process plants

automatic changeover

526 LC Series

Description

The 526 LC Series is an automatic switchover system designed to continuously supply high purity gas from a primary cryogenic source and backup high pressure cylinders. The system comes with options for flexible hoses or manifold connectors for the high pressure side for multiple cylinders. Due to flow and pressure limitations from a cryogenic sources the system has only three switching options that are matched to the three relief valve settings for cryogenic liquid cylinders.

Typical Applications

- Low flow purging
- Single inductively coupled plasma mass spectrometer (ICP-mass spec) argon installation
- Cell culture incubators

Description

The 547 Series Switchover is an automatic switchover system ideal for use in fuel cell or combustion research, aerospace parts cycle testing, or process and pilot plant pneumatic control where an uninterrupted supply of high purity, non-oxidizing gas is required at high pressure. The system comes with options for multiple inlet configurations and can deliver substantial flow with stable line pressure up to 3500 PSIG (240 BAR). It is ideal for use with nitrogen, helium, argon, hydrogen, carbon monoxide, air, or methane where cylinder fill pressures can be as high as 6000 PSIG (415 BAR). The 547 Series features a unique "Switch Shift" adjustment knob on the lower outlet pressure range that allows the unit to be switched from delivering up to 800 PSIG line pressure to as low as 150 PSIG of line pressure to economize cylinder gas consumption.

Typical Applications

- High delivery pressure gas systems
- Aerospace cycle testing
- Component helium leak testing
- Combustion research laboratories
- Synthetic fuel research and process plants
- High pressure hydrogen
- High pressure air systems
- Plant pneumatic valve supply

automatic changeover

527 Series

Description

The 527 Series Switchover is an automatic switchover system designed to supply a continuous supply of high purity or corrosive gas. The system comes with either flexible hoses for use with two cylinders or manifold connectors for use with the Maniflex Modular Manifold System. Due to pressure differential considerations, an integral line regulator is available to maintain constant downstream pressure.

Typical Applications

- Ultra high purity gases
- Research grade pure gases
- Gas chromatograph carrier and support gases
- Pure and mixed process gases
- Corrosive gases
- Ammonia
- Hydrogen Sulfide

high flow automatic switchover system

530 Series

Description

The 530 Series Switchover is an automatic switchover system ideal for use in aerospace, parts cycle testing, or process and pilot plant pneumatic control where an uninterrupted supply of non-corrosive, non-oxidizing gas is required at high pressure. The system comes with options for multiple inlet configurations and can deliver substantial flow with stable line pressure up to 3500 PSIG (240 BAR). It is Ideal for use with Nitrogen, Helium, Argon, or Hydrogen where cylinder fill pressures can be as high as 6000 PSIG (415 BAR).

Typical Applications

- High delivery pressure gas systems
- Aerospace cycle testing
- Component Helium Leak testing
- Combustion research laboratories
- Synthetic fuel research and process plants
- High pressure Hydrogen
- High pressure air systems
- Plant pneumatic valve supply

Advantium 16 System Monitor

alarms

Description

The CONCOA 575 Series system monitor reports and records the status of up to 16 individual points of observation. Ideal for monitoring automatic switchovers and other fail-safe gas delivery installations, inputs to the Advantium 16 may be grouped by sub-system for display and notification. The status of all inputs are displayed locally with high visibility, multicolor LEDs, turning red when an input exits its normal condition and blinking when all inputs in a user-defined system exit. Additionally, status may be accessed through user-programmable dry contact outputs, an integral web server, or e-mails sent by an on-board mail server based on user-defined triggers. Though capable of supporting any device with contact closure output relays, the highly configurable Advantium 16 is specifically designed for complex gas systems.

Model 22660

mass spec distribution panel

4

Description

This panel provides mass spec users with all the necessary gas handling equipment to properly install and operate their new mass spectrometer. The gas distribution panel provides all of the necessary controls to feed both air and nitrogen to the mass spec at the proper pressures for optimum operation. The valve arrangement provides the user with the option of using nitrogen for all the functions instead of air for the exhaust gas, Gas 1 and Gas 2 functions in the event that compressed air is not available. The panel is compact and easy to install. Simply mount the panel at a convenient location and connect your gas lines using the compression fittings provided.

Features

- Total high purity gas construction.
- Brass high purity line regulators.
- HL3300-125-580 regulator included for LN2 container.
- Diaphragm valves.
- Valved for use with air and nitrogen or nitrogen only.
- 1/4" OD compression fitting outlet connections.
- 50 feet of 1/4" polyethylene tubing.
- System is mounted on a 23" high x 12" wide x 1/2" thick HDPE panel.

Model 22687

generator backup panel

Description

This panel is designed to automatically provide a reserve supply to a gas generator in the event of a power loss, or the generator cannot provide sufficient gas to the system. The system may be used with air, hydrogen, or nitrogen generators and are available constructed of brass or stainless steel. An alarm option is available.

Features

- High purity two stage regulator to ensure constant delivery pressure as required.
- Stainless steel inner core flexible 3' pigtails with cylinder connections having integral check valves.
- Protocol station mounting assembly.

multiple source panels

Series 223

Description

Point of use panels provide a convenient organized method to deliver gas to your laboratory instruments or systems whether from a single source or multiple sources while providing individual pressure control for each application.

Features

- High purity brass or stainless steel line regulators.
- Individual inlets and outlets for each regulator.
- Horizontal or vertical configuration.
- HDPE panel.
- Inlet and outlet connections 1/4" stainless steel compression fittings.

single regulator panel

three-regulator vertical panel configuration

four-regulator horizontal panel configuration

100 for 0-100 psig
150 for 0-150 psig

Example:

2331-H-25-25-50-100-C describes a center inlet brass four-regulator panel in the horizontal orientation, with the first regulator on the left having a 0-25 psig delivery pressure range followed in order by three others: 0-25 psig, 0-50 psig, and 0-100 psig.

maniflex, modular manifolds

52 Series

Description

The 52B, 52C and 52S Series Maniflex are modular gasdistribution systems that may be connected to regulators, dual regulator switchovers, IntelliSwitch and AutoSwitch systems. A modular gas distribution system allows the user to size the inlet capacity of a system so that cylinder changes will not be as frequent. The Maniflex system provides the user with the capability of purchasing an unlimited number of manifold stations connected to a single header. The Maniflex headers themselves may be purchased as a complete system (unassembled) or as individual components

micromanifold

52L Series

Description

The 52L Series MicroManifold is a flexible non-corrosive gas distribution system that can be configured as a gas or vent manifold. Configured as a gas manifold, the 52L offers excellent gaseous flow capacity from either liquid cans or high-pressure cylinders to a CONCOA pressure control device. Configured as a vent manifold, the 52L equalizes the head space pressure of each liquid cylinder manifolded together. This allows each cylinder to withdraw equally and operate at maximum flow capacity with minimal losses.

Advanced Features

- Vent manifold excess flow orifices prevent hoses from whipping
- Safety disk protects manifold from over-pressurization
- Compact modular design provides simple field expandability
- Multiple cylinder hose options with universal gas compatibility
- Integrated 1/2" MPT connector that reduces potential leak sites
- A flexible design that can be used with 538, 539, 542, and 544 series switchovers or as a vent kit for 577 cryogenic system.

Description

The 53 Series Point-of-Use Panels provide a modular design to mount and locate 300 Series regulators at the point of use for high purity instrumentation or process gases. They are intended to provide final pressure control in gas distribution systems and are ideal for laboratory applications. The 53 Series are supplied with up to four high-purity regulators with rear entry inlet ports and diaphragm outlet valves. Five standard delivery pressure ranges can be individually selected for each regulator station 0-15 PSIG (0-1 BAR) to 0-200 PSIG (0-14 BAR).

Typical Applications

- Bulk gas distribution systems
- Gas and liquid chromatography
- High purity carrier gases
- Zero, span, and calibration gases
- High purity chamber pressurization

Description

The 5ZV Series high purity zone valve box provides branch control for large distribution systems in laboratories and other facilities that require high purity gases. Each high flow, stainless steel valve uses a metal-to-metal diaphragm seal to achieve leak rate suitable for up to grade 6.0 gases. The large window provides high visibility to the flow and pressure status of each gas pipeline. Valves may be in either position with the door closed, accommodating changes in laboratory gas requirements without disruption. Each unit is shipped with tubes to facilitate permanent joints outside the box; compression tube fitting connections at each valve allow easy maintenance in the unlikely event of a failure. Available in a vented configuration suitable for intermediate control of high purity, flammable gases, the 5ZV Series zone valve box provides flexible and convenient control for larger university and hospital laboratory environments.

Leak-Tector™ Testing Solution

4

Description	Specifications
<p>Leak-Tector is specially formulated for testing lines, cylinders, and systems carrying oxygen and other compressed gases for leaks. The formulation contains no oil, grease fatty acids, ammonias, or any other ingredient that could combine with pure oxygen to form either a flammable or explosive mixture.</p> <p>Leak-Tector is simple to use. Apply the solution to a connection or surface suspected of leaking and watch for bubble clusters. Large leaks form large bubble clusters. Very fine leaks form white foam that builds up for several minutes, making detection easy and certain. Solution dries clean with no greasy residue and does not need to be removed after testing. Tests have shown that Leak-Tector clearly detects leaks as small as one pound of gas in 100 years, a leak rate of 1.16×10^{-4} cc/sec of nitrogen.</p>	<p><i>Temperature range</i> +35° to +160°F</p> <p><i>Meets Air Force Spec.</i> MIL-L-25567</p>

Flowmeter Tutorial

4

Flowmeters are used to measure the rate of flow of liquids or gases. They do not control the rate of flow unless they are equipped with a control valve or flow controller. There are two basic types of flowmeters; rotameters and electronic mass flowmeters.

ROTAMETERS

Rotameters are a simple, precise and economical way to measure flow rates. They consist of a precision tapered glass tube containing one or more spherical floats. A measuring scale is etched on the glass tube. The diameter of the tube at the bottom, or inlet is approximately equal to the diameter of the float.

As fluid enters the tube, the float rises to a point where the area between the float and the tube wall is large enough to permit unrestricted flow, and the float is stationary. This position corresponds to a point on the tube scale and thus permits a reading of the rate of flow.

The capacity, or flow range of a tube can be varied by changing the float material. Materials of a lower density such as pyrex glass or sapphire give a lower flow capacity than materials of a higher density like tantalum or stainless steel (see Figure 1).

Rotameters, unlike mass flowmeters, are affected by temperature and pressure variation (see Figure 2.) When equipped with a control valve on the inlet, readings are correct as long as the outlet pressure is equal to the pressure at which the tube was calibrated. When a valve is installed on the outlet, the tube calibration pressure must match the inlet pressure to the flowmeter unit.

Figure 1

Relative positions of floats of various densities for the same rate of flow with 1 atmosphere outlet pressure.

Figure 2

Effect of float position for the same rate of flow in Figure 1, but with increased pressure at the flowmeter outlet.

high resolution flowmeter

Series 7920

4

Description

The 7920 flowmeters provide the most accurate indication and precise control of fluids available for a wide range of applications. This versatile meter is functionally and dimensionally interchangeable with other current designs while incorporating many innovative features.

All 7920 glass metering tubes have integral float guides to assure the accuracy of $\pm 5\%$ of full scale. Glass and stainless steel floats are standard. The meters are available in a wide range of flows.

Standard with this series is the TUBE-CUBE™, a unique, design concept. The "cube", a unitized tube holder, aligns the tube quickly and easily for a simple tube installation or replacement, reduces chipped tube ends, broken tubes, and misalignment. The TUBE-CUBE™ also provides tube protection during handling and storage and affords a 1.5 X scale magnification factor for more accurate tube reading. End seals in the design are direct-acting and non-rotating for fast alignment and convenient service access.

Design Features

- High resolution 150mm scale length
- Many standard direct reading scales available
- Precision taper, fluted metering tube
- Lowest available pressure drop via maximum flow path area increases available flow rates at low feed pressures
- Standard front panel mounting requires minimum hardware - easy installation, quick access.
- Available utility and high precision metering valves do not require special fittings
- Simplified; direct acting non-rotating compression seal

Applications

- Carrier and fuel gas chromatography
- Atomic absorption
- Semiconductor manufacture
- Chemical processing
- General research and industrial uses

dual gas proportioner

Series 7950

Description

The gas proportioner meters the flow of each of two gases and mixes them thoroughly in a special mixing tube to produce homogeneous two-component mixtures.

Concentration accuracies of 10% of component value are maintained with a standard unit using typical calibration curves. (In a desired mixture of 1% gas A and 99% of gas B, a concentration between .9% and 1.1% is maintained.) Individual units can be calibrated for non-corrosive gases to attain an accuracy of 5% of the component value. Individual calibration curves are supplied with these specially calibrated units.

The control valves are installed at the outlets making these gas proportioners back pressure compensated. The readings on the tubes are accurate regardless of the down-stream pressure, so long as the inlet pressures are maintained at the levels for which the tubes were calibrated.

The unit is recommended for 50 psig pressure but can be used at any pressure between 10 and 200 psi.*

These proportioners are available in both aluminum and stainless steel construction. When ordering a gas proportioner, specify the composition of the desired mixture, the gases, the discharge rate, and inlet pressure in addition to the model number.

*For best performance, it is recommended that tubes have only one float.

How to order

All models include baseplate, mixing tube and two flowmeter tubes of your choice. If unsure of correct tubes, provide the composition range of intended mixtures, total outlet flow and operating inlet pressure. We will select the tubes.

Series 7974 & 7975

large flow acrylic flowmeters

Description

The Series 7974 and 7975 acrylic flowmeters are useful in a wide variety of applications involving non-corrosive gases where flow rates exceed those of traditional laboratory models. All units have direct reading scales in either liters/minute or cubic feet/minute of air. Correction factors for other gases can be provided.

economic acrylic flowmeter

Series 7923

Description

The Series 7923 acrylic flowmeters are an ideal low cost tool for measuring flow rates of inert and non-reactive gases. The 1/8" female standard inlet and outlet connections are contained in brass inserts to ensure a secure leak-free connection to prevent cracking of the acrylic body. A needle valve to control the flow rate is included.

Series 810C Mass-Trak

mass flow controllers

Description

Thermal mass flow controllers like the Series 810C Mass-Trak are more reliable than volumetric flow devices like rotameters because they are relatively immune to changes in gas temperature and pressure. Because these instruments measure molecular flow, they provide the most reliable, repeatable and accurate method of delivering gas to your system.

The 810C is designed to control the flow of non-corrosive gases. The instruments built-in display and set-point control eliminate the need for separate power supply and readout electronics, standard on most mass flow controllers. A straight, large diameter sensor tube prevents clogging and contamination. The fast response valve provides precise one-step control of critical gas flows. You simply, set it and forget it.

Available in flow ranges from 0-10 sccm to 0-50 slpm. The standard unit accepts 0-5 VDC or 4-20 mA command signals for applications that require remote set point control.

How It Works

Gas enters the Mass-Trak and divides into two flow paths. Most of the flow goes through the laminar-flow bypass. This creates a pressure drop that forces a known fraction of the flow through the sensor tube. Two resistance temperature detector coils around the sensor tube direct a constant amount of heat into the gas stream. Heat transfer between these elements results in the interaction with the molecules of the flowing gas, independent of temperature and pressure fluctuations. The sensor signal is amplified, linearized and calibrated to achieve a direct reading of gas mass flow rate.

As the gas leaves the sensor and bypass, it flows through the servo-control valve. This valve is similar to an on-off solenoid valve, except that the current to the valve is modulated so that the valve plug assumes the exact height above the valve orifice necessary to maintain the valve's commanded flow. Built-in electronics allow Mass-Trak to maintain continuous proportional control by comparing the measured sensor signal to the command valve flow rate.

0-30 slpm = 30000

0-40 slpm = 40000

0-50 slpm = 50000

All flows are based on standard conditions of 70°F and 1 ATM unless otherwise specified when ordering.

Z = factory set output option:

V = 0-5 VDC

A = 4-20 mA

Series A820

electronic mass flowmeters

4

Description

The Series A820 electronic mass flowmeters are compact, self-contained units designed to indicate the flow rate of gases. Unlike variable area meters, flow rates are unaffected by variations in temperature and pressure within specified limits. The mechanical layout of the design includes an LCD readout built into the top of the transducer. This readout module is tiltable over 90 degrees to provide optimum reading comfort. The readout is connected by a standard modular plug, and is readily removable and extended for remote reading installations. Units are available in aluminum or stainless steel.

Features

- Rigid metal construction.
- Maximum operating pressure – 1000 psig.
- NIST traceable calibration certification.
- Leak integrity 1 X 10⁻⁷ sccm helium.
- 0-5 VDC or 4-20mA signals.
- Built-in tiltable readout display in engineering units.
- Circuit protection.
- Totalizer option available.

Specifications

Accuracy
±1.5% of full scale, including linearity for gas temperatures of 59°F to 77°F and pressures of 5 to 60 psia

Repeatability
±0.5% of full scale

Response time
Generally 2 seconds to within ±2% of actual flow

Temperature coefficient
0.15% of full scale/°C

Pressure coefficient
0.01% of full scale/psi

Maximum pressure drop
0.04 to 3.23 psid depending on flow range

Gas and ambient temperature
32 to 122°F

Output signals
Linear 0-5 VDC (1000 ohms min load impedance)
or 4-20 mA (0-250 ohms loop resistance)

Transducer input power
12 VDC; 200 mA of maximum

Time constant
800 ms

Materials in fluid contact
Aluminum units: anodized aluminum, 316 SS, brass, Viton o-rings
Stainless steel units: 316 SS and Viton o-rings

Attitude sensitivity
No greater than + 15 degrees from horizontal to vertical:
Standard calibration is in horizontal position.

Connections
1/4" compression fittings

Leak integrity
1 X 10⁻⁷ sccm of helium maximum to the outside environment

CE compliant
EN 55011 class, class B: EN50082-1
SGD Catalog 2009:SGD-2903 Catal

Series 6200

indicating oxygen trap

4

Description

This unit is a step above other indicating oxygen traps. The unit comes to you completely assembled and ready for installation. It is ideal for use in-line directly after our Series 6300 oxygen removing trap to determine when to replace the larger unit. Used in this way the 6200 unit will last a considerable time if it is monitored regularly. A centimeter scale on the tube helps you to monitor the condition of the reactants.

The 6200 Series actually removes oxygen rather than convert it to another form of contamination. Oxygen reacts with the activated bed material to form manganese oxide that has a deep brown color providing a dramatic and progressive color change. The presence of moisture does not affect the oxygen removing capacity of the unit.

Features

- Reduces oxygen to less than 15 ppb.
- Reactive materials are contained in a glass tube protected by a clear plastic outer tube. The reactive materials are only in contact with glass and metal.
- Centimeter scale on reaction tube helps to monitor activity.
- The expended reactant material is non-hazardous, non-toxic, non-flammable, and non-reactive.
- Mounting clip available for convenient installation.
- Oxygen removing capacity: 6200 - 30 mg, 6250 - 150 mg
- Working pressure: 100 psig
- Dimensions: 6200 - 1.125" O.D. x 9.5" long,
6250 - 1.5" O.D. x 10.25" long

Ordering Information

Model	Connections
6200-2*	1/8" tubing compression
6200-4*	1/4" tubing compression
6250-2*	1/8" tubing compression
6250-4*	1/4" tubing compression
6200C	mounting clip for 6200
8012C	mounting clip for 6250

* Available with stainless steel compression fittings - add "SS" to part number.

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 6200C mounting clip with 6200 Series hydrocarbon trap.

6200C Mounting Clip

oxygen removing purifier for hydrogen

Series 6210

4

Description

The Series 6210 Purifiers remove oxygen from hydrogen by catalytic action. They are capable of removing up to 1% oxygen from a hydrogen stream down to a level of less than 1 ppm. This reaction is normally accomplished at room temperature. At higher oxygen impurity concentrations, some-what elevated temperatures may be experienced depending on operating conditions.

The purification is carried out by the formation of water from the oxygen impurity and the hydrogen background. If water presents a problem in your system it is suggested that a Model 8010 or 8000 purifier be installed in the system after the Series 6210 unit.

The catalytic materials do not require regeneration and will function indefinitely providing that they are not contaminated. Sulfur and halogens are the primary contaminants of concern.

Series 6300

oxygen traps

4

Description

These Series 6300 oxygen traps contain a highly active, metal-containing, inert supported reagent filled into a one-piece aluminum container. The trap is capable of reducing the oxygen content of a gas stream down to 99.99998% of its original concentration. Each unit is filled under a heated flow of ultra high purity helium to eliminate the need for extensive purging prior to GC or GC/MS operation.

The Series 6300 units are ideal for use with hydrogen and inert carrier gases commonly used with TC and FID gas chromatographs as well as argon-methane mixtures used with electron capture gas chromatographs. The all metal housing virtually eliminates contamination and resultant signal noise that often occur with traps constructed of other materials. These units can also be used to treat carbon monoxide, carbon dioxide, alkanes, alkenes, aliphatic hydrocarbon gases and low boiling point aromatics, like benzene and toluene.

Features

- Reduces oxygen levels to less than 15ppb.
- Scrubbing agent sphere size optimized to achieve maximum surface area and capacity to provide twice the surface area and capacity of "look-alike" units.
- Filter design and aspect ratio prevents channeling and promotes even flow and efficient scrubbing.
- Inlet and outlet fitted with 40 micron stainless steel frits.
- All metal construction.
- Bed material treated with ultra high purity helium.
- Operating pressure: 250 psig
- Oxygen removal capacity: 6300 525 mg
6350 4200 mg
- Dimensions: 6300 1.25" O.D. x 11.25" long

*Available with stainless steel compression fittings - add "SS" to part number.

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C mounting clip with 6300 Series oxygen trap.

8012C Mounting Clip

CO₂ trap

Series 6400

4

Description

The 6400 Series carbon dioxide trap is designed to remove CO₂ gas from air, argon, helium, hydrogen, or nitrogen. The trap body is constructed of borosilicate glass with nickel plated end fittings with stainless steel sintered frits.* The absorption media is a formulation of sodium hydroxide and calcium hydroxide with an high absorptive capacity and indicating properties. Typically, this material will absorb 15-20% of its weight in carbon dioxide before the material is saturated and needs to be replaced. Replacement is indicated when the normally white color of the material turns violet. If moisture is detrimental to your system, a moisture trap should be installed down stream from this unit to absorb water evolved from the absorption of the carbon dioxide.

Features

- Removes carbon dioxide to less than 0.5 ppm
- Inlet and outlet fitted with 40 micron stainless steel frits.
- Reaction with carbon dioxide indicated by color change from white to violet.
- Inlet and outlet connections are 1/4" or 1/8" stainless steel compression fittings.
- CO₂ removing capacity:

6410	45 grams CO ₂
6425	90 grams CO ₂
- Dimensions:

6410	1.5" O.D. x 12.5" long
6425	1.75" O.D. x 16.5" long

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 6400C or 8040C mounting clip with 6400 Series carbon dioxide trap.

8040C Mounting Clip

Series 8000

high capacity units

Description

The model 8000 replaceable cartridge gas purifier is similar to the Model 8010 but is designed for higher capacities and a lower working pressure. The Model 8000 is constructed of a machined aluminum shell that accepts a large capacity cartridge. This shell may be permanently mounted when installed in the gas line and can be serviced without disturbing the line connections. Spring pressure holds the replaceable cartridge tightly against the bottom gasket to prevent the gas to be purified from bypassing the cartridge. The side inlet is located at the bottom of the unit oriented 90° from the outlet located at the top of the unit.

The model 8000 purifier shell must be used in conjunction with specially designed replaceable cartridges (Model 8000-1, 8000-2, or 8000-3)filled with various adsorbents. These are described below. These cartridges are shipped in hermetically sealed cans with convenient pull-tab ends for easy opening. This improved packaging ensures full retention of capacity in storage until the time of use.

Materials

Shell body: anodized aluminum
Gaskets: buna-N

for pressure applications up to 3000 psig

Series 8010

Description

The model 8010 replaceable cartridge gas purifier is useful in many laboratory and industrial applications where the introduction of oil and/or water can result in poor performance or equipment shut-down. It is not uncommon to find varying levels of these impurities in some industrial gases and occasionally even in specialty carrier gases. The small daily operating costs are easily justified by the prevention of a system shut-down and the subsequent cleaning and/or repair costs.

The units are especially useful in GC carrier gas lines to ensure that undesirable moisture does not enter the instrument. Water can contribute to inaccurate results and the rapid deterioration of expensive chromatography column separation phases.

The model 8010 purifier shell must be used in conjunction with specially designed replaceable cartridges.

Models 8010-1, 8010-2, or 8010-3 are filled with various adsorbents. Model 8010-4 contains a 5 micron sintered bronze filter element. These are described below. These cartridges are shipped in hermetically sealed cans in a dry nitrogen atmosphere with convenient screw caps for easy opening. This improved packaging ensures full retention of capacity in storage until the time of use.

Series 8012, 8020, & 8040, 8050

indicating moisture traps

Description

These units are designed to remove water, oil and organics from gases commonly used as gas chromatography carrier gases. They are constructed from Lexan® polycarbonate tubing with aluminum end caps sealed with Viton® o-rings, except for the 8050 which has a solid aluminum housing and is thus non-indicating. All units are filled with a mixture of molecular sieve 13X and indicating molecular sieve 4A. These are the highest capacity molecular sieves available and the preferred choice for gas drying. The blue indicating sieves turn buff color at 20% relative humidity.

Features

- Reduces water to less than 20 ppb.
- Available in 3 sizes (120 cc, 200 cc, 400 cc, 1600 cc) that can easily be refilled.
- Inlet and outlet o-ring sealed connectors are equipped with 40 micron sintered stainless steel frits to prevent particulates from entering your system.
- Mixed spherically shaped 13X and 4A absorbents provides superior bed packing with less resistance to flow.
- Mounting clip available for convenient installation.
- Moisture removal capacity:

8012	21.6 grams
8020	36.0 grams
8040	72.0 grams
8050	132 grams
- Dimensions:

8012-2 or -4	1.5" O.D. x 9.0" long
8020-2 or -4	1.5" O.D. x 12.5" long
8040-2 or -4	1.75" O.D. x 17.5" long
8050-8	2 3/8" O.D. x 17" long
- Working Pressure:

8012, 8020, 8040	125 psig
8050	250 psig

8012C Mounting Clip

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C, 8040C or 8050C mounting clip with 8012, 8020 and 8040 Series moisture traps.

Ordering Information

8050-8*+	735 cc	1/2" tubing compression fitting
8050R	1500 cc	provides enough for two refill
8012C		for mounting 8012 and 8020 units
8040C		for mounting 8040 units only
8050C		for mounting 8050 units only

+ 8050 is a non-indicating trap.

* Available with stainless steel compression fittings - add "SS: to part number.

hydrocarbon traps

Series 8200

4

Description

These units are designed to remove organics, such as alcohols, aromatics, chlorinated hydrocarbons, esters, ethers, hydrocarbons, and ketones from air, hydrogen and inert carrier gases used in gas chromatography. They are constructed of aluminum and filled with extremely high surface area coconut shell based activated carbon.

The 8200 is a refillable purifier. Since impregnated carbons do not readily desorb all compounds, we recommend that the units be changed or refilled on a regular schedule using our 8200R refill kit that provides enough material for two charges of an 8200 or the 8250R which provides one charge of an 8250.

Features

- Removes organics from air, hydrogen, and inert carrier gases. Does not remove light hydrocarbons like methane.
- Highly active coconut shell based carbon efficiently removes many types of hydrocarbon compounds.
- All metal housing
- Refillable 200 cc or 1600 cc capacity
- 40 micron filters on the inlet and outlet
- Mounting clip available for convenient installation
- Working pressure: 250 psig
- Dimensions: 8200 1.5" O.D. x 12.5" overall length
8250 2 3/8" O.D. x 17" overall length

Ordering Information

Model	Connections

8250R	Refill kit - contains 3 charges
8200R	Refill kit - contains 2 charges
8012C	Mounting clip
8050C	Mounting clip for 8250

* Available with stainless steel compression fittings - add "SS" to part number.

8012C Mounting Clip

Gas traps should be mounted in a vertical position to ensure proper contact of the gas with the adsorbent. Use model 8012C mounting clip with 8200 Series hydrocarbon traps.

Filter Applications

Gas Chromatography

Particulates in an instrument carrier gas stream can reduce the overall performance of laboratory analytical work. Removing particles can reduce background noise levels and enhance instrument accuracy and precision.

Pharmaceutical Manufacturing

The capability of these filters to remove bacteria and other particulate matter enables pharmaceutical manufacturers to install a filter in gas lines to those systems requiring process, purge or blanket gases, thus ensuring a virtually sterile gas atmosphere.

Pneumatic Operated Devices

Because of the small orifices normally associated with these devices, they often malfunction and require frequent servicing. Installation of a particulate filter in the air or nitrogen feed lines helps to ensure longer trouble free operation, thus reducing down-time.

Semiconductor Manufacturing

With increasing levels of device density the effect of particulate contamination becomes more damaging to potential yields. Semiconductor manufacturers install these filters in virtually all their gas lines to reduce the effects of particulates and improve their production yields.

Series 5010

Teflon® membrane gas line filter 0.01 microns

Description	Features	Specifications
The Teflon® medium in this filter efficiently traps particles down to 0.01 microns. These units may be installed in gas lines supplied by cylinders or bulk sources. Electronic Cylinder Scales

Description

The pressure of a liquefied gas remains constant as material is withdrawn as long as a liquid phase remains in the cylinder. When the liquid phase is exhausted the pressure drops very quickly and the cylinder empties without warning. This phenomenon renders a cylinder pressure gauge virtually useless. A similar situation arises when using cryogenic containers of liquid nitrogen, oxygen, and argon. The only way to monitor the contents of a cylinder of liquefied gas or a cryogenic container is by weight.

The Series 620 and 320 electronic scales are designed to give a positive indication of the amount of product remaining in the cylinder as material is being withdrawn. These units allow the user to electronically subtract the tare weight of the cylinder so that only the net contents can be read directly. The built-in alarm can be set for any weight value from 0-100% of the scales capacity. The units provide a red LED visual alarm and an audible alarm with silence function. An integral solid state relay is provided for the activation of external alarms or other equipment when the alarm set point is reached.

The scales are ruggedly constructed using one or more load cells in a sturdy stainless steel and/or aluminum diamond plate platform with mechanical stops at 150% of capacity to prevent damage.

The model 620G-300 with a capacity of 300 pounds has a 9.5" x 9.5" stainless steel platform that accommodates most compressed gas cylinders. For larger diameter cylinders, the 320DL-500 is available with a capacity of 500 pounds has a 36" x 36" diamond plate steel platform. The model 320ML-1000 has a 1000 pound capacity and accommodates cryogenic containers with its 36" x 36" aluminum diamond plate steel platform. A ramp is available for each model so that cylinders can easily be rolled on and off the scale platform without lifting.

320 Series

620G-300

Features

- Controller has large 1" high LCD digital display in water resistant housing
- Rugged load cell weighing technology with 300, 500, or 1000 pound capacity
- Weight resolution up to 0.1 pound
- Accuracy 0.1% of full scale
- Built-in visual alarm and audible alarm with silence function
- Built-in solid state relay
- 0-100% of full scale tare weight adjustment
- 0-100% of full scale alarm set point adjustment
- Both large and small platform sizes available
- Easy unit conversion from pounds to kilograms

Applications

Recommended for use with all liquefied and cryogenic containers in applications where running out of gas will cause a serious disruption in operations or a loss of product.

cylinder scale for liquefied gases

Model 900

Description

The pressure of a liquefied gas remains constant as material is withdrawn as long as a liquid phase remains in the cylinder. When the liquid phase is exhausted the pressure drops very quickly and empties without warning. This phenomenon renders a cylinder pressure gauge virtually useless. The only way to monitor the contents of a cylinder containing a liquefied gas is by weight.

The Model 900 cylinder scale is designed to give a positive indication of the amount of product remaining in the cylinder. It allows the user to subtract the tare weight of the cylinder so that the net contents can be read directly. A color coded dial reads in pounds and kilograms. A nonskid ramp is available to make loading cylinders convenient and easy.

The scale is ruggedly constructed and features a stainless steel cover for durability.

900-6 Scale Ramp

4

Applications	Features	Specifications
Recommended for use with all liquefied gases such as carbon dioxide, ammonia, nitrous oxide, fluorocarbons, hydrogen sulfide, sulfur dioxide, propane and heavier hydrocarbon gases.	<ul style="list-style-type: none"> • Heavy duty 16 gauge • Stainless steel cover • Dual dial scale - pounds and kilograms • Color-coded easy to read dial 	<ul style="list-style-type: none"> • <i>Tare weight range</i> 0-140 lbs. (0-68 kg.) • <i>Product weight range</i> 0-140 lbs. (0-68 kg.) • <i>Total capacity</i> 280 lbs (136 kg.) in 5 lb. (2 kg.) divisions • <i>Readability</i> 1 lb. (0.5 kg.) by estimation • <i>Dimensions</i> 10 3/4" x 10 1/4" x 2" high

Series 8491

flash arrestor

Description

The new 8491 Series re-settable flashback arrestors offer four (4) safety devices in each unit. Safety features include protection against flashbacks with a wide range of mixtures of oxygen or air with flammable gases including hydrogen, acetylene, methane and LPG gases. The design includes a built-in non-return (check) valve to stop reverse flow and a thermal shut off which stops gas flow in the event of hose or pipe line fire. An easily re-settable pressure control stops gas flow in the event of reverse flow or a flashback that creates 10 psig back pressure. This feature alerts the user that a reverse flow or a flashback of greater than 10psig has occurred. These units are easily re-set by pulling up on the pressure control ring (shown above), no disassembly of the gas line or special tools are needed. The 8491 Series high flow capacity makes them suitable for a broad range of applications. Units are U/L listed and meet ISO 5175, EN 730, BS 6158, and AS 4603 standards.

Features

- 100% flashback tested after assembly
- U/L listed and meets strict international standards (see table)
- Automatically re-sets for flashbacks and revers flow below 10 psig
- Alerts user by shutting of gas flow in the event of a reverse flow or flashback exceeding 10 psig back pressure (captures back pressure in the housing, no flame or gas is exhausted to the atmosphere)
- Stainless steel flame barrier positively extinguishes flame within the housing
- Checks reverse flow and provides positive shut-off of revers flow over 10 psig
- Thermal cut-off
- Built-in 100 micron stainless steel sintered filter on inlet
- High flow capacity (see table)

stainless steel flash arrestor

Series 8492

4

Description	Features
<p>The model 8492 is an ideal choice where stainless steel is desired as the material of construction. It may be used on flammable gases other than those approved by U/L providing the materials of construction are compatible. When installed in a line containing a flammable gas these units will prevent reverse flow, stop, and extinguish a flashback. The unit shuts off the flow of gas in the event of a flashback or reverse flow in excess of 7 psig. Re-setting is automatic when the downstream pressure is relieved. There is no need to open the gas line and no disassembly or special tools are required.</p>	<ul style="list-style-type: none"> • U/L listed 23Y5 for: Acetylene @15.0 psig Hydrogen/air @ 50.0 psig LPG @50.0 psig Oxygen @143.0 psig. • May be used on compatible corrosive flammable gases. • Reusable – can be reused after a flashback without opening the system or removing from service. • Stainless steel flame barrier positively extinguishes flame within the housing. • Checks reverse flow and provides positive shut-off of reverse flow over 7 psig. • Thermal cut-off. • Built-in 100 micron

check valves

Description

Check valves prevent the return flow of gas, thus keeping foreign substances out of lines, regulators and cylinders located upstream of the valve.

These valves are a spring loaded design with the spring on the high pressure side to protect it from foreign substances. The positive stop prevents over-stressing of the spring by sudden surges of gas pressure. An o-ring at the valve seat provides quick, efficient sealing.

The valves have a one piece body with 1/4" NPT female connections inlet and outlet. It is rated for 3000 psig with a cracking pressure of approximately 1 psig.

502 Series

straight purges

Description

The 502 Series purges are designed for use with high purity gases to ensure system integrity during breakdown of components or during gas source changes. Purges provide safety by preventing the release of toxic or corrosive gases into the workplace when changing cylinders, corrosion resistance by preventing corrosive or halogen gases from coming into contact with atmospheric moisture, and purity by preventing air from infiltrating high purity systems at the time of cylinder change.

533 Series

high flow diaphragm valves

Description

The 533 Series high flow diaphragm valves are ideal for primary or pipe line control in high purity or corrosive gas services. The forged 316L stainless steel body and metal-to-metal diaphragm seal ensure leak tight integrity at higher pressures. The ergonomic round knob, special diaphragm material and spring design ensure easy operation at high pressure and a high cycle life over a broad temperature range. With a positive seat shutoff, panel mount as standard and a directional flow arrow signifying recommended primary flow, the 533 Series is ideal for integrating into high flow systems.

manual control valves

Description

Manual controls are designed for direct connection to a compressed gas cylinder valve outlet. They provide a simple means of transferring the contents of a cylinder to another system or vessel. They **DO NOT** control pressure and should never be used without an operator in attendance at all times.

Four models are presented here with the following basic design features:

- Maximum inlet pressure - 3000 psig
- Teflon® packing for smooth leak-free operation
- Finger-tip control of flow from only a few cc per minute to very rapid withdrawal

emergency shut off valves

586 Series

4

Description

The 586 Series Emergency Shut Off Valve kits are ideal for use as safety devices in high purity, flammable, toxic, or corrosive gas systems where fail-safe shutdown of gas supply and flow is required. The pneumatically-actuated packless diaphragm valves feature long life Egiloy® diaphragms, metal to metal seals, and nickel-plated aluminum actuators. Designed for out of the box control by the CONCOA 585 Emergency Shut Off Controller, these normally closed valves can be integrated into any CONCOA gas delivery system to provide instantaneous shut off. The single valve kit comes with one valve, hose barb connections, and tubing to support a single gas source such as a regulator. The dual valve kit is supplied with two valves, hose barbs, hose barb tee, and tubing to control both headers on a switchover from a single pneumatic source.

Materials and Specifications

Maximum Inlet Pressure	3500 PSIG (240 BAR)
Temperature Range	-40°F to 140°F (-40°C to 60°C)
Helium Leak Integrity	1 x 10 ⁻⁹ scc/sec

Model 3-033-R002

SF6 leak detector

4

Description

The remarkable sensitivity of this hand held unit allows the user to detect sulfur hexafluoride to levels equivalent to 0.1 oz/year (3 grams/year). An advanced microprocessor is the heart of this unit. Its digital signal processing provides excellent management of the circuitry and sensing tip signal. The microprocessor monitors the sensing tip and battery voltage levels 4000 times per second, compensating for even the most minor fluctuations in signal. This translates into a stable and dependable tool in almost any environment.

Convenience features have been incorporated into the 3-033-R002 to enhance its operation. Seven levels of sensitivity provide and increase of 64 times from level 1 to level 7. Unique tri-color LEDs show a progressive and wide range of leak size indication, communicate the sensitivity level, and provide a true voltage indication of battery power level. A tactile keypad controls all functions. The housing design provides the user with a secure grip and control and places the visual indicators in direct sight during use.

Features	Specifications
<ul style="list-style-type: none"> • Microprocessor control with advanced signal processing. • Seven sensitivity levels. • Tactile keypad controls. • Real-time SF6 sensitivity adjustment. • Battery test function with battery voltage indication. • True mechanical pumping ensures positive air flow through the sensing tip. • Cordless and portable. • 14" flexible stainless steel probe. • Built-in mute feature. 	<p><i>Power Supply</i> 3V DC - two "C" cell alkaline batteries.</p> <p><i>Max Sensitivity</i> 0.1 oz/year (3 grams/year) SF6</p> <p><i>Operating Temperature</i> 30° to 125° F.</p> <p><i>Life</i> Approximately 30 hours normal use</p> <p><i>Response Time</i> Instantaneous</p> <p><i>Reset Time</i> one second</p> <p><i>Warm-up Time</i> Approximately 2 seconds</p> <p><i>Unit Weight</i> 1.2 pounds</p> <p><i>Dimensions</i> 9" x 2.5" x 2.5"</p>

mini gas leak detector

Model 21-070

Description

The model 21-070 gas leak detector easily and quickly pinpoints gas leaks emitting from pressurized systems. Using a thermal conductivity detector with signal amplification, the instrument is zeroed in ambient air and responds to any gas mixture with a thermal conductivity different from that of air. The instrument is highly sensitive, having an intrinsically high signal to noise ratio with amplification that provides a maximum usable sensitivity.*

The model 21-070 can be operated with little or no training. Turn it on, zero, probe for leaks: its that simple. As the instrument probe passes over the leak, a sample is drawn into the conductivity cell. When a leak is discovered a signal is registered on the LED bar graph. No messy soap solution, so system contamination

21-070	mini gas leak detector
59-050	carrying case

CAUTION

This leak detector is NOT designed to be used to determine leaks of combustible gases. It is designed to determine low level leaks of any gas having a different thermal conductivity than air. Utilizing this property it is, therefore, not specific to any gas or vapor. A combustible gas leak detector should be used for determination of combustible gas leaks in possible hazardous conditions.

Gas Detection Systems

fixed installation type – Beacon 110, Beacon 200, Beacon 410, and Beacon 800

Description

Gas detection should not be complicated. The Beacon™ Series is gas detection simplified. The Beacon™ Series are powerful, low cost fixed system controllers for one, two, or up to eight points of gas detection. They are microprocessor controlled, versatile, simple to install and operate, and priced to be the industry's best value single and multiple gas detection controllers.

The wide variety of sensor heads available for the Beacon Series can provide protection for many of the gases commonly used in industry or laboratories today. A comprehensive list of available detectors is provided below.

Sensors can be mounted directly at the Beacon™ housing, or can be wired remote from the controller. The digital displays have backlighting and simultaneous readout of the gas type(s) and concentration(s). The bottom mounted wiring hubs make wiring easy. An external reset switch allows alarms to be silenced from outside the controller housing.

With 10 or 12 amp rated relays, the Beacon Series can be wired directly to a variety of devices like horns, buzzers, or lights eliminating the need for costly external relays from the controller to devices.

The Beacon™ Series is housed in a NEMA 4X rated case for a weather tight seal. This case design complies with the new lock out / tag out standard and can be fully secured. An external reset switch allows the alarm to be silenced from outside of the controller housing. The Beacon™ units ship complete with a wall mounting kit for easy installation.

Features

- Low cost versatile solution!!
- Compact, weatherproof, NEMA 4X enclosure.
- 115 VAC or 12 VDC operation.
- Long life sensors (2+ years typical).
- Accepts LEL/O₂/H₂/S/CO direct wire sensors (Beacon 110, 200, and 410).
- Accepts any 4-20 mA transmitter.
- Audible alarm with reset button.
- Three programmable alarm levels.
- Built-in trouble alarm with relay.
- Relay rating 10 or 12 amps, form C.
- Provides 4-20 mA output.

Industry Applications	About Sensors	Direct Wire Detectors
<ul style="list-style-type: none"> • Laboratories • Semiconductor manufacturing facilities • Petrochemical plants & refineries • Water & wastewater treatment plants • Pulp & paper mills • Gas, telephone, & electric utilities • Parking garages • Manufacturing facilities 	<p>The sensor is the actual device that is sensing the gas. Three sensor types are available for use with the Beacon Series Controller: direct wire, gas diffusion, and sample draw. Sensors typically last 2 to 4 years, but can last for a longer or shorter time depending on the nature of the application.</p>	<p>Direct wire detectors are hard wired diffusion sensors to the controller and do not require a transmitter. They are, therefore, more economical than detectors requiring a transmitter. Direct wire detectors can only be used with the Beacon 110, 200, and 410 controllers. While the choice of gases is limited for hard wire detectors they can be an economical choice when available. In general, the use of a transmitter is preferred for distances over 300' to 500' to simplify calibration.</p>

fixed installation type – Beacon 110, Beacon 200, Beacon 410, and Beacon 800

Gas Detection Systems

4

Ordering Information

When ordering a Beacon system please specify the following components:

1. Controller part number
2. Detector assemblies required

Model	Description
72-2110 RK	Beacon 100 single point controller
72-2102 RK	Beacon 200 two point controller
72-2104RK	Beacon 410 four point controller
72-2108 RK	Beacon 800 eight point controller

Diffusion Detectors	Sample Draw Detectors
Diffusion detectors rely on the natural flow of air to bring the sample to the detection head. These are an excellent choice for gas cabinets or other forced flow environments where the detector is situated in a constant air flow from the potential gas release to the detector. All diffusion type detectors used with the Beacon Series have transmitters.	Sample draw detectors have an integral pump, which draws the surrounding air to the detector. They are the preferred choice when used in larger areas where there is no specific point at which one can expect a gas leak. All sample draw detectors used with the Beacon Series have transmitters.
Transmitters	
Most sensors require a transmitter to amplify the sensor signal, and to convert the gas sensor signals into a standardized output, such as 4-20 mA, for transmitting the signal to a controller. The transmitter is usually in close proximity to the sensor, and zero and span adjustments must be done at the transmitter. Note that some sensors and controllers do not require the use of a transmitter for LEL or Oxygen detection (Beacon 110, 200, and Beacon 410), and also one is not needed for short distance wiring of H ₂ S or CO sensors for the Beacon 110, 200, and Beacon 410. All transmitters used with the Beacon Series are operated from 24 VDC, and utilize either 2 or 3 wires. In general, even if a sensor can be used without a transmitter, the use of a transmitter is often preferred for distances over 300' to 500' to simplify calibration.	

Physical

Enclosure Wall mounting gray polycarbonate with hinged cover

Dimensions	<i>Beacon 110</i>	<i>Beacon 200</i>	<i>Beacon 800</i>
	Height: 8.5	Height: 8.5"	Height: 12.5"
	Width 7.0"	Width: 7.0"	Width: 11.0"
	Depth 4.3"	Depth: 4.3"	Depth: 6.4"

Conduit Connection ½" NPT conduit hubs: 2 3 4

Wiring Termination: Screw type terminal block 14 gauge max.

Environmental Operating Temp: -4°F to 122°F (-20°C to 50°C)

Storage Temp: -4°F to 158°F (-20°C to 70°C)

Relative Humidity: 0 - 95% RH

Enclosure Rating: NEMA-4X enclosure, chemical, and weather resistant.

Inputs

Direct Wired Sensors (Beacon 110, 200, and 410 only) Note: Beacon 800 requires 4-20mA sensors.

LEL / PPM Hydrocarbon

Oxygen

Carbon Monoxide

Hydrogen Sulfide

Remote amp not required for less than 500 feet.

4-20 mA Sensors: Accepts any 4-20 mA transmitter (24VDC, 2 or 3 wire). A wide variety of sensors are available with 4-20 mA signals. (See list of detectable gases. Wiring distances up to 5000 feet.)

Outputs

Relays:

Beacon 110:	4 relays - 12 amp rating (at 115 VAC), SPDT isolated contacts. 3 relays for gas alarm levels 1 relay for malfunction
Beacon 200:	2 relays per channel – 10 amp rating (@115 VAC), SPDT isolated contacts. 1 set of common relays: 2 for gas alarm levels, 1 for malfunction
Beacon 410:	2 relays per channel – 10 amp rating (@115 VAC), SPDT isolated contacts. 1 set of common relays: 2 for gas alarm levels, 1 for malfunction
Beacon 800:	2 relays per channel - 10 amp rating (@115 VAC), SPDT isolated contacts. 1 set of common relays: 2 for gas alarm levels, 1 for malfunction

Relays fully programmable for: increasing or decreasing alarm, latching or self reset, normally energized or normally de-energized, time delay for alarm on and alarm off.

4-20 mA Signal output, 4-20 mA (into 500 ohms impedance maximum).

24 VDC 24 VDC output provided to operate sample drawing adapters or other accessories.

Display: Alphanumeric display with back-lighting.

Beacon 110: 1 display, 16 characters per line; 2 lines.

Beacon 200: 1 display, 20 characters per line; 4 lines

Beacon 410: 1 display, 20 characters per line; 4 lines

Beacon 800: 2 displays, 16 characters per line; 4 lines each. All 8 channels continuously displayed.

Audible: Built-in audible alarm, 94 dB, mounted on enclosure. Coded Output: pulsing = gas alarm steady = fail

Visual: Beacon 110: 5 visual alarm LED's on the front cover for status indication, pilot, and malfunction.

Beacon 200: 4 visual alarm LED's on the front cover for status indication, pilot, and malfunction.

Beacon 410: 4 visual alarm LED's on the front cover for status indication, pilot, and malfunction.

Beacon 800: 4 visual LED alarms on front cover for alarm indications, pilot, and malfunction.

Power

115 VAC or 12 VDC standard

Optional: 230 VAC

Battery backup option available

Warranty

Two years materials and workmanship.

Eagle Portable Gas Detector

Description

The EAGLE is a powerful instrument that does more than offer standard confined space protection. The EAGLE also provides detection combinations never before offered in a portable gas monitor featuring the industry's widest selection of high quality, long life and field proven sensors.

The EAGLE's ergonomic design offers easy access to controls such as auto-calibration, alarm silence, demand zero, peak hold and a wide variety of other features. Each channel has 2 alarm levels plus TWA and STEL alarms for toxic channels. Alarm levels are adjustable and can be latching or self resetting. Standard features on the EAGLE, such as PPM/LEL hydrocarbon detection (5 ppm resolution) and a methane elimination switch for environmental applications are not available on most other competitive units. For quick response and recovery, the EAGLE has a strong internal pump that can draw samples from over 125 feet. The EAGLE will continuously operate for over 30 hours on alkaline batteries or 18 hours on rechargeable Ni-Cads. Many accessories such as long hoses, special probes, data-logging, continuous operation adapters, remote alarms and strobes, dilution fittings, internal hydrophobic filter, etc. are available to help satisfy almost any application. Rugged, weatherproof, easy to operate and maintain, the EAGLE is the industry's answer to portable gas detection.

	Hydrocarbons	0 - 100% LEL
	Oxygen (O ₂)	0 - 40% Vol.
	Carbon Monoxide (CO)	0 - 500 ppm
	Hydrogen Sulfide (H ₂ S)	0 - 100 ppm

**Included Accessories – Most Eagle units come with a 5' polyurethane hose, shoulder strap, four alkaline batteries, and a 10" hydrophobic probe as standard accessories. Units for toxic gases are supplied with a 3' Teflon hose without the hydrophobic filter.*

***Gases & Detectable Ranges - The EAGLE can be provided with many gas sensors not specifically listed above. Units can contain up to 6 gas sensors (4 Toxics maximum). Please specify the gases desired when requesting a quotation.*

Features

- Simultaneous detection of up to 6 different gases
- Wide variety of field proven gas sensors available
- PPM / LEL hydrocarbon detection
- Powerful long-life pump with 125' range
- Low flow pump shut off and alarm
- Methane elimination switch for environmental use
- Security "Adjustment Lockout Switch"
- Up to 30 hours of continuous operation
- Alkaline or Ni-Cad capability
- Ergonomic RFI/EMI/Chemical resistant case
- Data-logging option
- Auto-calibration
- Intrinsically safe design (most versions), CSA/NRTL & UL Classified

Specifications for Eagle Portable Gas Detector

- **Enclosure**
Weatherproof, chemical resistant, RF/EMI coated high impact poly-carbonate-polyester blend. Can be set in rain or into 2.5" water without damage. Ergonomically balanced with rugged top mounted handle.
- **Dimensions**
10.5" long x 5.9" x 7" tall
- **Weight**
5 lbs.
- **Detection Principle**
Catalytic combustion, electrochemical cell, and infrared.
- **Sensor Life**
2 years under normal conditions.
- **Sampling Method**
Powerful, long-life pump (over 6,000 hours) can draw samples over 125 feet. Flow rate approximately 2.0 SCFH.
- **Display**
4 x 20 LCD readout with backlighting. Viewed through window in case top. Display readings & status of all channels simultaneously.
- **Alarms**
2 alarms per channel plus TWA and STEL alarms. Fully adjustable for levels, latching or self-reset and silenceable.
- **Alarm Method**
Buzzer 85dB at 30 cm, dual high intensity LED's, and blinking display.
- **Controls**
6 external push buttons for operation, demand zero, and auto-calibration. Buttons also access LEL/ppm, alarm silence, peak hold, TWA/STEL values, battery status and many other features.
- **Continuous Operating Hours**
30 hours minimum using alkaline batteries, or 18 hours Ni-Cads.
- **Power Source**
Size D batteries, 4 alkaline or Ni-Cad, Charger has alkaline recognition to prevent battery damage if alkalines are charged.
- **Operating Temp. & Humidity**
-10°C to 40°C (14°F to 104°F), 0 to 95% RH, non-condensing.
- **Indication Accuracy**
Maximum variance +/- 5% of full scale.
- **Response Time**
30 seconds to 90% (for most gases).
- **Safety Design**
Intrinsically Safe, Class I, Division 1, Groups A, B, C and D. CSA/NRTL & UL Classified (most versions).
- **Standard Accessories**
Shoulder strap, alkaline batteries, hydrophobic probe, and 5 foot hose (for special toxic gas versions, shorter Teflon hose used without probe).
- **Optional Accessories**
 - Data-logging of up to 4 gases (No data-logging possible on 5 or 6 gas version or versions with more than 2 toxic sensors).
 - Remote alarm
 - Dilution fitting (50/50)
 - Ni-Cad batteries
 - Battery charger, 115 VAC or 12 VDC
 - Continuous Operation Adaptor, 115 VAC or 12 VDC
 - Extra loud buzzer
 - Extension probes
 - Internal Hydrophobic Filter (strong recommended)
- **Warranty**
One year material and workmanship.

Series 72 and 73

single gas personal monitor

Description	Features
<p>Individuals need personal protection in hazardous areas. The Series 01 units can provide the required protection at an affordable cost without the need to tote bulky equipment. These units are single gas monitors designed to protect personal from combustible hydrocarbons, oxygen deficiency, hydrogen sulfide, or carbon monoxide.</p> <p>The 01 series models have two preset alarms that are user adjustable. They are equipped with visual, audible, and vibration alarms. Replacement sensors are inexpensive, easily field replaceable, and have a life expectancy of 2 years.</p> <p>Each unit is controlled by a microprocessor for reliability and advanced capability. The two AAA size alkaline batteries provide continuous operation for 3000 hours, except the GP-01 LEL monitor which operates for 16 hours, but has a rechargeable Ni-Cad battery pack option that provides 8 hours of operation.</p>	<ul style="list-style-type: none"> • Pocket size; 1.4" W x 4.1" H x 0.8" D. • Light weight: 3.5 ounces. • Audible/visual/vibration alarms. • Automatic backlight during alarm. • Peak Hold, STEL, & TWA. • Low battery alarm. • Impact and water resistant. • Intrinsically safe, CSA, C/US classified Class 1, Division 1, Groups A, B, C, & D.

air safety monitors

580 Series

Description

The 580 Series Oxygen Deficiency Monitor is a compact system that is ideal for the continuous monitoring oxygen levels in any area where inert gases or confined space may produce a hazardous reduction in the oxygen content of the air. This system should be installed in gas storage and use areas, cryogenic freezer rooms, laboratory or industrial locations where liquefied or compressed gases may accumulate and pose a hazard of asphyxiation as required by OSHA 29 CFR 1910. The unique long lasting zirconium sensor provides accurate and rapid response to changes in oxygen concentration over a wide range of temperature and humidity conditions and does not drift due to weather or temperature. For laboratories with incubators, grow rooms, and beverage manufacturing, the 5803007 adds excess carbon dioxide detection to the oxygen deficiency monitor to ensure a safe environment for breathing.

Specifications

Specifications			
Gases Detected	Oxygen or Oxygen/Carbon Dioxide	Weight	1.6 lb (0.8 kg)
Range	0-25% Oxygen, 0-10,000 ppm Carbon Dioxide	Analog Outputs	4-20 mA
Accuracy	±1% of full scale	Relay Outputs	Dual level + fault: 24 V (2 A)
Operating Temperature	32°F to 130°F (0°C to 55°C)	Required Calibration	None
Display	3/4" LCD digital display, back lit		
Sensor Type	Zirconium oxide (Oxygen), NDIR (Carbon Dioxide)		
Sensor Life	10 years under normal conditions		
Power Requirements	24 VDC (350 mA)

Model 400 & Model 420

cylinder holding devices

OSHA regulations require compressed gas cylinders to be secured from toppling when in storage or in use. The devices shown here will help you comply with these regulations.

Description

Wall Mount Cylinder Holder Model 400

This cast aluminum cylinder holder provides an easy way to secure cylinders to a wall, in a gas storage cabinet, or other stable surface. The holder is attached with bolts or lag screws using the pre-formed holes 7 inches apart. The holder can be used with cylinders from 4 to 14 inches in diameter. Cylinders are held firmly in place with a nylon strap fitted with a sturdy buckle, with an optional steel chain and hook, or both strap and chain.

Ordering Information

Model	Description
400	Wall mount cylinder holder with strap
400C	Wall mount cylinder holder with chain and hook
400CS	Wall mount cylinder with strap, chain and hook
400 RS	Replacement strap

Description

Bench Type Cylinder Holder Model 420

This holder is designed to prevent toppling of cylinders when they are next to a lab or work bench and cannot be secured to a wall. The special screw clamp holds securely to a table top without marring the surface. The holder can be used with cylinders from 4 to 14 inches in diameter. Cylinders are held firmly in place with a nylon strap fitted with a sturdy buckle, with an optional steel chain and hook, or with both strap and chain.

Ordering Information

420	Bench mount cylinder holder with strap
420C	Bench mount cylinder holder with chain and hook
420CS	Bench mount cylinder with strap, chain and hook
400 RS	Replacement strap

small & large cylinder stands

Model 450 & Model 460

4

Description

**Small Cylinder Stand
Model 450**

This stand provides increased stability to cylinders with diameters of 4" to 7-3/8". It is constructed of nickel plated steel. Four thumb screws hold the stand securely to the cylinder. Stand height is 10".

**Non-tip Small Cylinder Stand
Model 470**

This stand offers a convenient method of securing a 3-1/4" cylinder on a table or lab bench. The stand is made of light weight brushed aluminum, yet the large diameter base provides stability even when a regulator is installed on the cylinder.

Description

**Large Cylinder Stand
Model 460**

This stand provides increased stability to cylinders with a diameter of 9" to 9-1/2" in situations where it is not possible to secure the cylinder to a wall or a bench with the model 400 or 420 cylinder holders. The cylinder can be rolled on and off with ease and is firmly held in place or quickly released by the cylinder holding band. With this unique design the cylinder rests on a steel plate and uses the cylinder's own weight to help keep the cylinder and stand stable and eliminate unsafe cylinder "ride up" that is common in some competitive models. Constructed of steel painted green.
Dimensions: 18" x 18" x 12.5" high
Weight: 13 lbs.

Description

Lecture Bottle Holders

Lecture bottles have rounded ends and require some means of support when in use. We provide two types of holders here that meet most requirements.

**Non-Tip Stand
Model 475**

This stand offers a convenient method of securing a lecture bottle on a table or lab bench. The stand is made of light weight brushed aluminum, yet the large diameter base provides stability even when a regulator is installed on the bottle

**Wall Mount Lecture Bottle Bracket
Model 480**

This bracket is made of powder coated steel and has spring steel clips that provide firm, secure support to the lecture bottle. The bracket is ideal for securing lecture bottles to lab cart or bench set-ups, in carrying cases for portable systems, or in storage cabinets.

Series 465

cylinder floor stands

4

Description

Available in two and three cylinder models, these floor stands are designed and built to provide safe storage of compressed gas cylinders with diameters up to 12" when a walk, post or bench is not available to secure the cylinder. Fully welded construction from 11 gauge and heavier plate steel and a quality epoxy powder paint finish provide structural integrity and long service life. Surfaces coming in contact with the cylinders are protected with vinyl edge guards. Cylinders are held securely in place with 1.5" polypropylene straps with steel cinch buckles.

Ordering Information

Model	Description	Dimensions	Weight
465-2	Two cylinder floor stand	28" w x 30" h x 12" d	41 lbs
465-3	Three cylinder floor stand	40" w x 30" h x 12" d	56 lbs

"Gas Station" process stands

Series 495

Description

There are many situations where it would be more convenient to locate gas cylinders and distribution systems near the process, but away from a wall or other secure fixture. The "Gas Station" solves this problem. It can be located in any open area and support two or three cylinders and the associated gas distribution equipment. The stand is secured to the floor with bolts through the four pre-drilled holes provided in the base. Cylinders sit on the base plate and are securely held to the 2"x2" square tubular steel frame painted gray with sturdy nylon belts. A changeover manifold or other distribution equipment can be conveniently mounted to the plate above the cylinders. The unit is shipped unassembled via UPS. Assembly is easily accomplished in 10-15 minutes.

Ordering Information

Model 495-2 Two Cylinder Gas Station

Dimensions: 28" w x 72 1/2" h x 12" d
Weight: 56 pounds

Model 495-3 Three Cylinder Gas Station

Dimensions: 40" w x 72" h x 12" d
Weight: 78 pounds

4

Series 490

cylinder storage racks

Description

The storage compressed gas cylinders to comply with Federal, State and Local regulations often presents a number of problems. These new cylinder storage racks can help organize your cylinder storage and help you comply with the myriad of regulations.

Because the frame is pre-drilled to accommodate anchoring the rack to the floor they are ideal for situations where cylinder must be located away from a wall or other securing fixture. Racks are available in standard sizes to hold one to nine cylinders. Custom racks are available. Standard rack configurations are show below.

The unique design of square steel tubing (2" x 2") components welded together to form the frame provides the rigidity necessary to allow the frame to be constructed without a bottom. This allows cylinders to be rolled into the frame without lifting.

Racks are provided with either single or dual restraint steel chains to secure the cylinders. Single restraint racks secure the individual cylinders with a chain for each cylinder located at the top of the rack. Dual restraint models have a set of chains for each cylinder at 15" and 30" from the floor.

Racks are painted with black powder coating to provide long lasting protection. These cylinder storage racks meet the requirements of the National Fire Protection Association, National Fire Codes, Uniform Fire Codes, Uniform Building Codes and Seismic Zone 4 Restraint Regulations, Compressed Gas Association and OSHA.

Features

- Safe cylinder restraint
- Organized gas cylinder storage
- Simple Installation
- Uses space efficiently
- Removable and relocatable

cylinder hand trucks

Model 6114 & Model 6214

Description

These hand trucks are specially designed to hold and easily transport heavy compressed gas cylinder by persons of moderate strength. They feature welded tubular steel construction for strength. All models roll quietly and smoothly on large semi-pneumatic or solid rubber tired wheels and casters for better maneuverability over rough or uneven surfaces. Trucks are finished with green, scratch resistant, high gloss, electrostatically applied, oven baked powder coat.

Model 6114

Single Cylinder Hand Truck

This unit is designed to handle one T or K type cylinder. It has two 4" rear casters, that fall into place when in use, to provide greater stability. The operator carries no load and has greater control over the truck. The rear wheel assembly is easily returned to the retracted position for storage. The cylinder is held securely on the truck by a safety chain.

Model 6214

Two Cylinder Hand Truck

Designed to handle two T or K type cylinders the 6214 has longer handles for ease of mobility and good load control. Retractable 4" rear casters drop into place when needed for extra load handling safety or collapse and lock into the frame for storage. The truck has dual binding chains for extra security and solid 10" rubber front wheels.

Series 7000

gas safety storage cabinets

4

Description

Gas safety storage cabinets are designed to provide local exhaust gas control to enhance the safety of storing or using hazardous gases. The use of gas cabinets provides a convenient way to achieve separation of gases by their classifications to satisfy both national and local fire and building codes.

When connected to a suitable exhaust system, air is drawn through the cabinet ensuring that any gas leakage is carried away and does not accumulate in the storage or work area. The cabinets can be fitted with manifolds or other gas controls so that both the cylinder and the control system are enclosed. When operators access the controls through the access window and a proper exhaust system is in operation, the cabinet has the capacity to allow 150-200 linear feet per minute of air to pass across the open window face to ensure that workers are not exposed.

Ordering Information

Model	Description
7100	one cylinder cabinet
7200	two cylinder cabinet
7300	three cylinder cabinet
7400	four cylinder cabinet
Options	Model
• Keyed door latch(es)	7000-1
• Keyed window latch(es)	7000-2
• Adjustable small cylinder shelf	7000-3

Features

- All welded construction using 11 gauge steel, epoxy painted. Texture finish outside, smooth finish on inside of cabinet.
- Exhaust vent located on top of cabinet is 6" diameter x 3" high.
- 165° F. sprinkler head with bee's wax coating located in cabinet top.
- Cylinder brackets accommodate 7"-9" diameter cylinders. The brackets can move vertically and horizontally for precise pigtail alignment.
- Self-latching and closing window(s) with 1/4" thick wire glass.
- Self-latching and closing door(s) with bottom louvers and flush mounted stainless steel paddle latch(es). Optional keyed latches available.
- All stainless steel fasteners.
- Meets or exceeds the Uniform Fire Code.

Cabinet Physical Data

Model	Cylinder Capacity	Dimensions* Outside	Door Opening	Weight	Exhaust Flow Required (SCFM)
7100	one	18"w x 18"d x 72"h	16"w x 70"h	235 lbs.	175
7200	two	24"w x 18"d x 72"h	22"w x 70"h	283 lbs.	250
7300	three	36"w x 18"d x 72"h	left 22"w x 70"h right 16"w x 70"h	331 lbs.	450
7400	four	48"w x 18"d x 72"h	left 22"w x 70"h right 22"w x 70"h	391 lbs.	600

*Overall cabinet height including exhaust vent is 75".

C-Series Gas Cabinet Systems

4

Description

The CONCOA C-Series Gas Cabinet Systems are designed to provide unparalleled protection to both the mounted gas supply system and their attached gas cylinders. Constructed with sturdy 11-gauge thick steel, the cabinets are built to meet international fire codes. Cabinets come pre-installed with a 165°F (74°C) sprinkler head near the exhaust vent. Cabinet doors and windows are made to close and latch automatically. The welded unibody construction and rigid cylinder brackets increase sturdiness of the cabinet in the event of fires or earthquakes.

Custom Cabinets

CONCOA designs and manufactures cabinets to suit any laboratory or analytical requirement. Possibilities include:

- Cabinets with separate pressure controls to deliver multiple gases of similar composition that can be stored in the same location.
- Cabinets for flammable gases that include emergency shut-off valves, gas detectors, and excess flow switches that can be integrated with a 585 Series emergency shut-off controller.
- Cabinets for reactive gases that support a variety of purging options.

Contact CONCOA for more information.

Cabinet	Cylinders	Regulator/Switchover Part Number	Description
C	1: One	XXX XXXX-XXX	One cylinder cabinet system for 400, 300, and 200 Series regulators with 529 Protocol Station Systems.
	2: Two		Two cylinder cabinet system for use with 515, 526, 527, 530, and 540 Series systems, 529 Series Protocol Station systems, and with all 400, 300, and 200 Series regulators.
	3: Three		Three cylinder cabinet system for use with 515, 526, 527, 530, 540 and 542 Series systems, 529 Series Protocol Station systems, and with all 400, 300, and 200 Series regulators.
	4: Four		Four cylinder cabinet system for use with 515, 526, 527, 530, 540 and 542 Series systems, 529 Series Protocol Station systems and with all 400, 300, and 200 Series regulators.

For example, to order a single-cylinder cabinet system with a 422 Series regulator with an outlet pressure range of 0-50 PSIG (0-3.5 BAR), a 0-4000 PSIG (0-275 BAR) inlet pressure gauge, a diaphragm valve with a 1/4" compression tube fitting, PSIG/kPa pressure gauges, and a CGA 350 connection for hydrogen service with Protocol Station, the part number would be: C1-4222331-350M. If ordering a 2-cylinder cabinet with a 527 Series switchover for hydrogen use, the part number would be: C2-5274171-350.

cylinder wrenches

Model 90001, 90002, 90003

Description

Model 90001

This universal cylinder wrench has 3 openings on one end (11/16", 1-1/8", 1-1/4") for tightening the various cylinder valve connections and most commonly used gas connections. The opposite end has 3/8" square box for opening cylinder valves that do not have hand wheels.

Model 90002

This wrench has a basic 3/8" square for opening cylinder valves that do not have hand wheels, such as chlorine and hydrogen sulfide.

Model 90003

The special configuration of this wrench provides an easy method of opening extra tight, hand wheel operated cylinder valves and removing difficult cylinder caps.

Remove difficult cylinder caps

Open tight valves easily

Series 601, 604, and 605

316 stainless steel flexible hose

Description

Series 601 hoses are constructed of 1/4" I.D. Teflon® lined stainless steel braid, rated for 3000 psig. The 601 hoses are fitted with 1/4" NPT brass end connections; they make excellent economical manifold pigtails. The 602 hoses are fitted with 1/4" NPT stainless steel end connections.

The Series 604 hoses are constructed of double braided stainless steel, fitted with stainless steel 1/4" NPT end connections, rated for 3000 psig, and cleaned for oxygen service.

Special Hoses

We can provide any of the hoses on this page in different lengths and with a wide variety of end fittings.

Series 601

- 1/4" I.D. Teflon® lined 316 stainless steel braided hose
- Rated for 3000 psig
- 601 1/4" NPT female x 1/4" NPT female
- 601M 1/4" NPT male x 1/4" NPT male
- 601MF 1/4" NPT male x 1/4" NPT female
- Cleaned for oxygen service

Series 604 and 605

- 1/4" I.D. 316 stainless steel double braided hose (605 Series has protective outer armor to provide greater safety and kink resistance.)
- Rated for 3000 psig
- 1/4" NPT female or male stainless steel end connections
- Cleaned for oxygen service

Cylinder Connections

4

Description

Regulator inlet connections are available for most worldwide standards. Each connection includes nut, gland, and washer (if appropriate) on the inlet side to connect to the cylinder and 1/4" MPT connection on the outlet side to connect to the inlet of any PurityPlus regulator. CGA (Compressed Gas Association) connections are manufactured in accordance with CGA standard V-1 (1997). BS (British Standard) connections are manufactured in accordance with BS 341(1990) and DIN (German Industrial Standards Organization) connections are manufactured in accordance with DIN 477 (1991). Please consult the gas supplier or appropriate standard to determine the correct connection for particular gases. Other international standard connections are available upon request.

UHP (DISS) Cylinder Connections

4

Description	Features
This special group of cylinder connections was developed through the cooperation of industry and the Compressed Gas Association for use with ultra purity gases primarily used in conjunction with semiconductor chip manufacturing applications. The sealing surfaces are similar to a face seal connection used with tubing and they require either a nickel gasket or Kel-F gasket to achieve a seal. They are only available in stainless steel.	<ul style="list-style-type: none"> Available with in three mating styles <ul style="list-style-type: none"> 1/4" face seal male 1/4" NPT male 1/4" tube stub Supplied as a set nut, nipple, and nickel gasket

gas heaters

Series 6284

Description

The series 6284 gas heaters when installed between the cylinder and the regulator are designed to reduce the problem of regulator icing that is associated with high flow withdrawal rates of some gases due to their expansion from high pressure to low pressure.

This thermostatically controlled heater will not overheat the gas and can be left unattended without any gas flow. A pilot light indicates when the thermostat is closed and the heating element is operative.

Specifications

Material: Steel case with black oxide finish covering a solid brass body

Max. flow: 90 cubic feet/hour

Voltage: 115 volt single phase 60 hz, 200 watts provided through a 5-foot grounded cord with molded plug.

Heating Range: Thermostat between 160° - 190°F.
Outer case temperature 85°F

Dimensions: 6-5/8" overall length, 2-1/2" diameter.

Weight: 2 pounds

Ordering Information

Model	Application
6284-320	Carbon Dioxide
6284-326	Nitrous Oxide
6284-580	Argon

Series 9900

low gas pressure alarm

Regulator sold separately

Description	Features
<p>The Series 9900 complies with the requirements of NFPA 99 2002 paragraph 5.1.10.5.5 that mandates the continuous monitoring of purge gas while welding or brazing gas lines.</p> <p>These alarms are ideal for any gas application where a decrease in gas pressure could be detrimental to the operation.</p> <p>Rated for 3000 psig the Series 9900 can be installed between the cylinder valve and the user's pressure regulator or system. At low pressure, the Series 9900 provides both an audible and visual alert to the user when the container pressure reaches the pre-set level. Units are available in brass or stainless steel with the appropriate CGA connections for easy installation between an existing cylinder and regulator, or with pipe threads or compression fittings for permanent installation into a gas supply system.</p> <p>Standard models require 110 VAC power. For remote locations or where power is not readily available there are battery-powered models that operate on a standard 9V battery.</p>	<ul style="list-style-type: none"> • Wide range of alarm pressure selection • Available in brass or stainless steel • Available with CGA connections or 1/4" NPT female inlet and outlet • Complies with the requirements of NFPA 99 2002 paragraph 5.1.10.5.5 • Choice of power source - 110 VAC, 9V battery • Provides both an audio (~90 dB @ 10 feet) and a visual alarm • Mating inlet and outlet connections

Purge Assemblies

4

Description

The installation of a purge assembly on the inlet of your pressure regulator, pigtail inlet, or gas control system is highly recommended anytime a toxic, corrosive, flammable, or ultra high purity gas is to be used in the system. Purge assemblies perform the following multiple functions in your gas system during cylinder change-overs:

- Eliminate the release of toxic, corrosive, or flammable gases into the workplace.
- Maintain the integrity of an ultra high purity system.
- Protect equipment in corrosive gas service from exposure to moisture, thus preventing destructive corrosion.

Deep Purge Valve System Series 4800

Description

The Series 4800 deep purge valve system provides the ultimate in purging capability in a compact design with a very small internal volume. These units can be used in a wide variety of applications where contamination must be avoided during cylinder changeovers.

The deep purge valve system is an ideal accessory installed between the cylinder and the regulator of ultra high purity carrier lines for gas chromatography systems that cannot tolerate even a minimum amount of oxygen and moisture that can enter the system during cylinder changeovers.

The deep purge valve system can be used with gas mixtures containing reactive components to ensure that no moisture enters the sampling system to cause deterioration of the reactive components that can lead to concentration inaccuracies. Use of the 4820 also provides protection from the release of toxic gases into the atmosphere during cylinder changeovers.

Series 4500

tee purge assemblies

Description

The Series 4500 tee purge assemblies are designed to be installed between the cylinder valve and the pressure regulator. They enable the user to purge the system through the regulator with an inert gas.

The Series 4500 units feature multi-turn diaphragm packless valves and a check valve installed on the purge gas inlet. They are rated for 3000 psig.

Ordering Information

Series 4600

tee purge assemblies

Description

The Series 4600 tee purge assembly was designed for use with inert gases such as argon, helium, and nitrogen. When installed either on the inlet to a pressure regulator or on the cylinder end of a pigtail they are an ideal device for purging the cylinder inlet connection after cylinder changeover to eliminate the introduction of oxygen and water to the system. These tee purges conveniently use the gas in the cylinder for purging.

The Series 4600 can be constructed either with multi-turn or 90° lever actuated diaphragm packless valves. This entire assembly is designed to pass a helium leak rated of 1 x 10-9 sccm. They are rated for 3000 psig.

deep purges

502 Series

Description

The 502 Series Deep Purge is CONCOA's most effective purge device. It incorporates a unique snorkel tube design that forces the purge gas all the way back through the inlet connection to the cylinder valve cavity assuring virtual zero dead space purging. The Deep Purge may be used to purge the entire regulator body or just the cylinder connection at the time of cylinder change. The Deep Purge performs a positive displacement or cycle purge of the system.

Materials and Specifications

tee purges

502 Series

Description

The 502 Series purges are designed for use with high purity gases to ensure system integrity upon breakdown of components or during gas source changes. Purges provide safety by preventing the release of toxic or corrosive gases into the workplace when changing cylinders, corrosion resistance by preventing corrosive or halogen gases from coming into contact with atmospheric moisture, and purity by preventing air from infiltrating high purity systems at the time of cylinder change. Tee purges are available in two configurations. An inboard purge allows inert gas to enter the system for displacement or cycle purging. An outboard purge permits a process or inert purge gas to safely exit the system. The two tee purge types can be used together in a "block and bleed" configuration to effectively purge any system.

585 Series

emergency shut off controller

4

Description

The CONCOA 585 Series emergency shut off controller is designed to automatically shut down up to eight independent flammable, toxic, corrosive, or high purity gas sources for safety or process control. The Controller includes an integral emergency stop button, audible and visual alarm, six programmable input relays, and up to eight programmable pneumatic output ports for control of high purity CONCOA 586 Series emergency shut off valves. Eight additional output relays are configurable as normally open or normally closed for integration with a building or master alarm system. The status of all eight inputs and outputs are displayed with high visibility, multicolor LEDs so that the triggering event is identified and the status of all output ports is shown. Ideal for flammable or toxic gas shutdown control in the event of fire or leak detection, the controller can be configured to operate the eight pneumatic outputs in unison or independently. The system comes with on board and web server for monitoring and program status with email and real time display.

585 Series

emergency stop button

Description

The 585 Series Emergency Stop Button provides a remote means of initiating emergency shutdown of any gas supply connected to the 585 series Emergency Shut Off Controller with 586 Series Emergency Shutdown valves. With a highly visible red push to lock, twist to reset stop button, the normally closed relay is safely housed inside a bright yellow NEMA 4 control box. Once pushed, the normally closed relay opens and signals shutdown to the controller. Easy installation is achieved with multiple knockouts for conduit or cable wiring, and custom units may be ordered on request. The emergency stop button is ideal for point of use or emergency exit locations that are remote from the controller and gas sources.

Specifications

Mechanical Life:	300,000 operations
Operating Force:	1.8lbs (0.8 kg)
Mounting Adapter:	The adapter is fixed to the mounting surface by means of incorporated screws
Construction:	Polyamide and polycarbonate
Environmental Rating:	IP65; NEMA 4, 13
Relay:	Single pole, single throw, normally closed (NC)
Operating Temperature:	-13°F to 140°F (-25°C to 60°C)

580 Series

excess flow switches

Description

The 580 Series Excess Flow Switches are designed to precisely detect increasing flow rates of gases in critical processes. When connected to the 585 Series Emergency Shut Off controller, they ensure immediate shutdown of any gas line in the event of a pipeline break or abnormal flow condition. The electrical switch is operated by a high energy permanent magnet. All wetted parts are 316L stainless steel for compatibility with any gas service. They are explosion proof, compact, field adjustable and linear with a wide range of flows and inlet pressures to suit any installation where excess flow shutdown is required.

welding purge monitor

Model MK1V

Description

The MK1V purge monitor detects the level of oxygen in purging gas to indicate when the oxygen content is at a satisfactory level to weld. The exact oxygen content is provided, thus preventing the excessive use of purge gas necessary to ensure that the weld will be oxidation free. The monitor readout provides a continuous oxygen level even during welding to detect unforeseen purge problems that can cause low quality welds.

The monitor may also be used as to check confined spaces for safe oxygen levels before personnel enter the area and while they are working.

The MK1V small size and battery operation make is very easy and convenient to use. A sturdy carrying case stores the monitor, a stainless steel probe, a 2 meter length of rubber hose, a vacuum bulb, and a carrying strap.

dry ice makers

Series 8800

Description

The Series 800 dry ice makers provide an easy, convenient way to have dry ice in your laboratory whenever you need it. All you need is one of these units and a CO2 cylinder with a full length siphon tube. No batteries or electrical connections are required.

Model 8874 The transparent polycarbonate body allows viewing of dry ice production and is never as cold as the dry ice, even when filled, allowing safe transport of the unit and contents around the lab. The system operates at very low pressure (displayed on the built-in dial gauge) and incorporates multiple pressure relief safeguards. Six foot transfer line is included.

Model 8876 Dry ice is contained within a high-density polyethylene chamber that can be safely handled with a gloved hand and used to carry the dry ice block. This rugged unit is made with epoxy coated steel, aluminum and brass and includes a 6' transfer line.

Model 8886 Ideal for low demand applications or for packing or freezing samples. All components are included to connect to the cylinder to make dry ice flakes as needed. Brass nozzle, fittings and collection bag attach directly to the CO2 cylinder.

Series 8636 Whisper Valve®

silenced cryogenic safety relief valve

Description

The Whisper Valve is a silenced safety device for use with cryogenic containers.

The valve solves the problem of the loud noise, over 100 dB, associated with the activation of the relief valve in cryogenic containers containing nitrogen, argon or carbon dioxide. Many users of gas in cryogenic containers complain to their suppliers that the loud activation noise scares their employees and causes work disruptions and results in damaged product.

The Whisper Valve is easily installed on the vent valve of any cryogenic container and silently relieves the container pressure slightly below the normally installed relief valve. Whisper Valve reduces the relief of gas pressure to a noise level of 40-50 dB under normal conditions. For reference the average library noise level is 40 dB.

The Whisper Valve also reduces the gas losses of your cryogenic container to average of less than 48 cubic feet over 24 hours.

Whisper Valves are available in four settings, 22, 230 psig, 350 psig, and 500 psig. Other settings available on request.

Features

- Reduces cryogenic relief valve blow-off noise to 40-50 dB.
- Easily installs on any cryogenic argon, oxygen, or nitrogen container.
- Available in four ranges to prevent most container noisy blow-offs.
- Reduces gas losses to less than 48 cubic feet per 24 hours.
- Convenient wall mount kit available.
- Standard CGA 295 inlet connection for nitrogen.
- CGA 440 inlet connection for oxygen.

Ordering Information

Model Number	Description
8636-22	Whisper valve for cryogenic containers with 22 psig relief setting
8636-230	Whisper Valve for cryogenic containers with 230 or 235 psig relief setting
8636-350	Whisper Valve for cryogenic containers with 350 psig relief setting
8636-500	Whisper Valve for cryogenic containers with 500 psig relief setting
8636-KIT	Wall mount bracket, panel mount nut, and six-foot hose with CGA 295
8636-02-22	Whisper valve for cryogenic containers of oxygen with 22 psig relief setting
8636-02-230	Whisper valve for cryogenic containers of oxygen with 230 or 235 psig relief setting
8636-02-350	Whisper valve for cryogenic containers of oxygen with 350 psig relief setting
8636-02-500	Whisper valve for cryogenic containers of oxygen with 500 psig relief setting
8636-02-KIT	Wall mount bracket, panel mount nut, and six-foot hose with CGA 440

fully automatic switchover manifolds for cryogenic liquid supply

Series CTM75

4

Description	Features
<p>The CTM75 Cryo Transfer Manifold assures a continuous supply of cryogenic liquid. It is set to transfer from the "in use" empty bank to the "reserve" full bank based on pressure and temperature.</p> <p>This PLC-based system is continuously monitoring the pressure and temperature of both banks. In "read only" mode, the PLC screen indicates actual pressure and temperature of each bank and compares them to their switchover (target) settings. In "programming" mode, the PLC allows you to change the switchover settings.</p> <p>The LEDs indicate the status of each bank at all times.</p>	<ul style="list-style-type: none"> • Continuous cryogenic liquid supply • Automatic switchover from "depleted" bank to "stand-by" bank without operator's involvement • Built-in "hot gas by-pass" for each manifold side Audible (optional) and visual alarms indicating when a supply side is depleted • Two supply modes: <ul style="list-style-type: none"> - On Demand - Keep full • Use the entire amount of cryogen in the cylinders • Eliminates downtime due to empty cylinders • Easy field pressure and temperature settings to better meet your application needs

Ordering Information

Series	Fluid	Qty. of Cyl. left bank	Qty of cyl right bank	Application	Options
CTM75	Argon = 3	(Max. 2 cylinders)	(Max. 2 cylinders)	Bio Medical = BM Laser = L Industrial = I High Purity = HP	Floor Stand = FS Vacuum insulated flexible hose = VJH Flashing beacon = FB Audible Alarm = AA

Operation Mode Description

ON-DEMAND

The "On Demand" supply mode vents the "hot gas" coming from the liquid cylinders through the cool down solenoid valve before opening the process solenoid valve. The process solenoid valve will open only when receiving an external signal. The same process occurs during the switchover between the depleted "in use" side to the "full reserve" side.

KEEP FULL

The "Keep Full" supply mode assures instant liquid withdrawal whether or not dispensing. The system monitors both pressure and temperature and keeps optimal conditions by opening and closing the cool down solenoid valves. By doing so, quality liquefied gas is maintained up to the process solenoid valves. Thus, the CTM75 will dispense cryogenic liquid within seconds. Because both sides are "kept Full" at all times, the "reserve bank" will immediately supply cryogenic liquid as soon as the "in use" side is depleted. The end use must be aware that the "Keep Full" supply mode will vent product to atmosphere if the demand is low.

Gas Safety and Material Compatibility Data Chart

This data has been compiled from the best information available and is offered as a guide to proper material selection. The data presented are generalized for average conditions of temperature and pressure. The user should always investigate the characteristics of the gas being handled and take all the proper precautions. Our technical staff will be pleased to give free advice and technical information on any gas or chemical product of interest.

PURE GASES CGA SELECTION CHART FOR FITTINGS

CGA Fittings Required	Pure Gases
510/300	Acetylene
590/346/347/702	Air
240/660/705	Ammonia
580/680/677	Argon
350	Arsine*
320	Carbon Dioxide
350	Carbon Monoxide
660	Chlorine
510	Cyclopropane
350	Deuterium
350	Ethane
350	Ethylene
510	Ethylene Oxide
580/680/677	Helium
350/695/703	Hydrogen
330	Hydrogen Chloride
330	Hydrogen Sulfide
580	Krypton
350/695/703	Methane
510	Methyl Chloride
580/680/677	Neon
580/680/677	Nitrogen
326	Nitrous Oxide
540/577/701	Oxygen*
350	Phosphine
510	Propane
350	Silane*
668/660	Sulfur Dioxide
590	Sulfur Hexafluoride
580/680/677	Xenon

MIXED GASES CGA SELECTION CHART FOR FITTINGS

CGA Fittings Required	Mixed Gases	
	Minor Component	in Major Component
240/660/705	Ammonia	Nitrogen
350	Butane	Nitrogen
296	Carbon Dioxide	Oxygen
580	Carbon Dioxide	Helium or Nitrogen
580	Carbon Dioxide and/or Nitrogen	Helium
590	Carbon Monoxide	Air
330	Chlorine	Nitrogen
350	Diborane	Argon, Helium, Hydrogen, Nitrogen
580	Freon-12	Nitrogen
296	Helium	Oxygen
350	Hexane	Nitrogen
350	Isobutane	Nitrogen
580	Krypton	Argon
590	Methane	Air
580	Moisture	Argon, Helium or Nitrogen
660	Nitric Oxide	Nitrogen
660	Nitrogen Dioxide	Air or Nitrogen
590	Nitrous Oxide	Nitrogen
590	Oxygen	Nitrogen or Helium
350	Propane	Nitrogen or Helium
590	Propane	Air
660	Sulfur Dioxide	Air or Nitrogen
590	Sulfur Hexafluoride	Argon, Helium or Nitrogen
350	Sulfur Hexafluoride	Hydrogen

It is recommended that the user thoroughly familiarize himself with the specific properties of these gases.

The Compressed Gas Association (CGA) has selected and standardized the valve outlet to be used on each gas cylinder. These standards, contained in the document "CGA STANDARD V-1, Compressed Gas Cylinder Valve Outlet Connections", have been adopted to prevent the inadvertent mixing of gases which could be reactive and to avoid other possible misuse hazards.

The above chart may be used for guide purposes only. Consult your gas supplier to determine the actual CGA connection required when ordering a regulator.

Since the combined characteristics of a mixture of gases often differ from the properties of the separate components, different CGA connections are often required. The CGA has selected and standardized the valve outlets to be used with mixed gases. These standards are described in CGA publication V-7 - "Standard Method for Determining Cylinder Valve Outlet Connections for Industrial Gas Mixtures".

Mixtures which use the same CGA connection as if the minor component were in its pure gas form have not been included for the sake of brevity. The proper fitting for these mixtures can be determined by looking up the minor component on the chart for pure gases.

Section 6 - Glossary

	Page Number
Glossary	6.1 - 6.2

Absolute Pressure – The total pressure exerted on a system, equal to the gauge pressure plus atmospheric pressure. Absolute pressure is designated as PSIA. Often pressure measurements utilize a gauge to record the difference between the system and the atmospheric pressure. This is called gauge pressure and is designated as PSIG.

Atmospheric Pressure – The pressure exerted by the weight of the atmosphere at sea level, equal to 14.696 PSI or 0.98692 Bar.

Absolute Zero – The zero point of the ideal gas temperature scale designated as 0° Kelvin, -273.15° Celsius, and -459.67° Fahrenheit.

Absorption – Physical or chemical process in which the atoms or molecules of a material penetrate into another material. The atoms or molecules are taken up by the volume in the material, not the surface.

Adsorption – Adhesion of the atoms or molecules of a material to the surface of another material (called an adsorbent). Usually a gas, a liquid or a dissolved substance will adhere to the surfaces of a solid.

Anhydrous – The general term describing a material that does not contain any water molecules.

Atomic Weight – Ratio of the average mass of a chemical element's atoms to carbon-12. The standard atomic weight of a naturally occurring element is the ratio of the weighted average of all of the naturally occurring isotopes to carbon-12, expressed in atomic mass units.

Atomic Mass Unit – 1/12th the mass of carbon 12.

Asphyxiant Gas – Non-toxic gas that can displace the oxygen containing atmosphere, resulting in unconsciousness and death.

ACGIH – American Conference of Government Industrial Hygienists – Professional Society devoted to the advancement of occupational and environmental health.

Boiling Point – Temperature at which the pressure of a liquid is equal to the pressure exerted by the surrounding atmosphere. See Normal Boiling Point.

BTU – British Thermal Unit – The quantity of heat required to raise the temperature of one pound of water 1° F.

Calibration Gas – A gas or gas mixture of accurately known composition used as a comparative standard.

Calorie – The amount of heat required to raise the temperature of one gram of water 1° C.

Catalyst – A substance that reduces the activation energy of a chemical reaction. Catalysts participate in reactions, but are not consumed by the reaction.

CGA – Compressed Gas Association – Professional Organization dedicated to the development and promotion of Safety Standards and Safe Practices in the Industrial Gas Industry.

CAS – Chemical Abstract Services – A division of the American Chemical Society (ACS) that provides comprehensive databases of publicly disclosed research in chemistry and related sciences, including the world's largest collection of substance information, the CAS RegistrySM.

Compressed Gas – Any Material or mixture with a pressure exceeding 40 PSIA at 70° F or having an absolute pressure exceeding 104 PSIA at 130° F or any flammable liquid having a vapor pressure exceeding 40 PSI at 100° F.

Corrosive – A Chemical compound which visibly destroys or irreversibly damages living tissue or chemically attacks and eats away rubber, metal, or other substances.

Critical Temperature – The lowest temperature at which a gas cannot be liquefied, no matter how much pressure is applied. At this temperature, the liquid and gas have the same density.

Critical Pressure – The pressure required to liquefy a gas at its critical temperature.

Cryogenic Liquid – A liquid with a boiling point below -60° C.

Density – The ration of the mass of a substance to its volume.

DOT – Department of Transportation – Government agency whose purview is to regulate the transportation of hazardous materials.

Dew Point – The temperature at which water vapor begins to condense into liquid water.

EPA – Environmental Protection Agency – Government agency established in 1970 for the establishment and enforcement of environmental protection standards.

Fill Density – The percent ratio of the weight of a liquefied gas in a container to the weight of the water that the container will hold at 68° F.

Flammable Limits – The concentration of a flammable vapor in air at normal atmospheric pressure and temperature that will propagate a flame upon contact with an ignition source. See LEL, UEL.

Flash Point – The lowest temperature at which a liquid gives off enough vapor to form a flammable mixture with air.

Inert Gas – A gas which does not react with other materials at NTP.

Liquefied Compressed Gas – A gas that can be liquefied in a container with increased pressure at normal temperature.

LEL – Lower Explosive Limit – The maximum concentration of a specific flammable vapor in air at NTP that will propagate a flame upon contact with an ignition source. Concentrations below this level will not propagate a flame upon contact with an ignition source.

Mole – The mass in grams of a substance that is equal to the molecular weight the substance. Also called gram molecular weight.

Molecular Weight – The sum of the atomic weights of all atoms in a molecule.

Normal Boiling Point – The temperature at which the vapor pressure of a liquid equals 1 atmosphere (14.696 PSIA).

NTP – Normal Temperature and Pressure – 20° C and 760 torr.

OSHA – Occupational Safety and Health

Administration – An agency of the Department of Labor whose mission is to prevent work related injuries and illnesses by issuing and enforcing standards for workplace safety and health.

Oxidizer – Substance that causes or contributes to the combustion of another material. An oxidizer is not necessarily combustible in itself.

PPM – Parts Per Million – Notation for specifying precise amounts of very low concentrations of chemical elements or compounds. For gases, denotes the number of molecules of a gas or gas mixture found in every 1 million molecules of the gas of gas mixture.

Specific Gravity – The ration of the weight of a given volume of a substance to the weight of an equal volume of a reference material. Liquids and solids are normally compared to water (sp. gr. of H₂O = 1), while gases are normally compared to air (sp. gr. of air = 1).

Specific Heat – The amount of heat required to change the temperature of a unit of mass (or a quantity, such as a mole) of a substance one degree at either constant pressure (CV) or constant temperature (CP).

Specific Volume – The volume occupied by a unit mass of a material at a given temperature. The specific volume of a gas is normally expressed as cubic feet of volume per pound of gas.

STP - Standard Temperature and Pressure – 0° C at 760 Torr.

Torr – Common unit of measure for vapor pressure. 1 Torr = 1 mm of mercury.

Toxic Gas – A gas that has an LC50 in air of 200 PPM or less. Even low concentrations of a gas may cause injury or death.

UEL – Upper Explosive Limit – The maximum concentration of a specific flammable vapor in air at NTP which will propagate a flame upon contact with an ignition source. Concentrations above this level will not propagate a flame upon contact with an ignition source.

Vapor Pressure – The pressure exerted by a vapor in equilibrium with its liquid or solid phase at a given temperature. The vapor pressure of gases is normally measured at 70° F.

With over 150 members and more than 600 locations, no matter where you are throughout the U.S., Canada, and Mexico, a local PurityPlus distribution center will be ready to provide quick and dedicated service. Contact us at www.purityplusgas.com.
